The accompanying notes are an integral part of the consolidated financial statements.

NOTE 1 - DESCRIPTION OF BUSINESS

InspireMD, Inc., formerly Saguaro Resources, Inc. (the "Company"), a public company, is a Delaware corporation formed on February 29, 2008. On March 28, 2011, the Company changed its name to InspireMD, Inc.

On December 29, 2010, the Company entered into a Share Exchange Agreement (the "Exchange Agreement") by and among the Company and InspireMD Ltd., a limited company incorporated under the laws of the State of Israel in April 2005. Subsequent to the date of execution of the Exchange Agreement, shareholders of InspireMD Ltd., holding 91.7% of InspireMD Ltd.'s issued and outstanding ordinary shares, executed a joinder to the Exchange Agreement and became parties thereto (the "InspireMD Shareholders"). Pursuant to the Exchange Agreement, on March 31, 2011, the InspireMD Shareholders transferred all of their ordinary shares in InspireMD Ltd. to the Company in exchange for 46,471,907 newly issued shares of common stock of the Company (the "Initial Share Exchange"). In addition, the remaining holders of InspireMD Ltd.'s ordinary shares separately transferred all of their ordinary shares of InspireMD Ltd. to the Company, in exchange for an aggregate of 4,194,756 newly issued shares of common stock of the Company (the "Follow Up Share Exchange" and, together with the Initial Share Exchange, the "Share Exchange"). As a result of the Share Exchange, InspireMD Ltd. became a wholly owned subsidiary of the Company.

The Share Exchange is being accounted for as a reverse recapitalization, equivalent to the issuance of stock by InspireMD Ltd., for the net monetary assets of the Company. Accordingly, the historical financial statements of the Company reflect the historical operations and financial statements of InspireMD Ltd.

The Company, together with its subsidiaries, is a medical device company focusing on the development and commercialization of its proprietary stent platform technology, MGuardTM. MGuardTM provides embolic protection in stenting procedures by placing a micron mesh sleeve over a stent. The Company's initial products are marketed for use in patients with acute coronary syndromes, notably acute myocardial infarction (heart attack) and saphenous vein graft coronary interventions (bypass surgery). The Company markets its products through distributers in international markets, mainly in Europe and Latin America.

In addition, the Company operates in Germany through its wholly-owned subsidiary InspireMD GmbH, a German limited liability company incorporated in November 2007, where the Company subcontracts the manufacturing of its stents.

The Company believes that it has sufficient cash to continue its operations into 2013. However, depending on the operating results in 2011 and 2012, the Company may need to obtain additional cash in 2013 to continue to fund operations.

NOTE 2 - BASIS OF PRESENTATION

The accompanying unaudited condensed consolidated financial statements have been prepared on the same basis as the annual consolidated financial statements, included in the Company's June 15, 2011 registration statement on form S-1. In the opinion of management, the financial statements reflect all adjustments, which include only normal recurring adjustments, necessary to present fairly the financial position and results of operations of the Company. These consolidated financial statements and notes thereto are unaudited and should be read in conjunction with the InspireMD Ltd's audited financial statements for the year ended December 31, 2010. The balance sheet for December 31, 2010 was derived from InspireMD Ltd's audited financial statements for the year ended December 31, 2010. The results of operations for the six months ended June 30, 2011 are not necessarily indicative of results that could be expected for the entire fiscal year.

NOTE 3 - RECENTLY ADOPTED AND ISSUED ACCOUNTING PRONOUNCMENTS

In October 2009, the FASB issued amendments to the accounting and disclosure for revenue recognition. These amendments, effective for fiscal years beginning on or after June 15, 2010 (early adoption is permitted), modify the criteria for recognizing revenue in multiple element arrangements and require companies to develop a best estimate of the selling price to separate deliverables and allocate arrangement consideration using the relative selling price method. Additionally, the amendments eliminate the residual method for allocating arrangement considerations. The adoption of the new guidance did not have a material impact on the Company's consolidated financial statements.

In May 2011, the FASB issued amended guidance and disclosure requirements for fair value measurements. These changes will be effective January 1, 2012 on a prospective basis. Early application is not permitted. These amendments are not expected to have a material impact to the consolidated financial results.

NOTE 4 - FACTORING OF RECEIVABLES

During the six month period ended June 30, 2011, the Company entered into a factoring agreement amounting to \$1.2 million with a certain banking institution on a non-recourse basis. The factoring of trade receivables under this agreement is accounted for as a sale. Under the terms of this factoring agreement, the Company transfers ownership of eligible trade receivables without recourse to the banking institution in exchange for cash. Proceeds on the transfer reflect the face value of the account less a discount. The discount, amounting to \$12 thousand during the six months period ended June 30, 2011 is recorded to "financial expenses - net" within the Condensed Consolidated Statements of Operations.

The receivables sold pursuant to this factoring agreement are excluded from trade receivables on the Condensed Consolidated Balance Sheets and are reflected as cash provided by operating activities on the Condensed Consolidated Statements of Cash Flows. The banking institution has no recourse to the Company's assets for failure of debtors to pay when due.

The related commissions on the sales of trade receivables sold under these factoring agreements amounting to \$22 thousand were recorded to "financial expenses - net" within the Condensed Consolidated Statements of Operations.

NOTE 5 - CERTAIN TRANSACTIONS:

During the first quarter of 2011 and prior to the Exchange Agreement, InspireMD Ltd. raised approximately \$990,000 and issued approximately \$03,000 ordinary shares through private placements.

During the first quarter of 2011 and prior to the Exchange Agreement, InspireMD Ltd. granted 600,294 stock options to employees and consultants at a cash exercise price of \$1.23 per share. The options had terms of four to ten years.

On January 4, 2011, the Company entered into a convertible loan agreement with its distributer in Israel (the "Lender"), in the amount of \$100,000 subject to the following conditions:

- the convertible loan does not bear annual interest;
- in the event of a share exchange or similar transaction, the Lender shall have, at its sole discretion, the option to convert the loan into either (i) shares of the Company's common stock at a price of \$1.23 per share (\$10 as relates to Inspire MD), or (ii) the Company's product at a price of 400 euro per unit (which represents the market price for the Lender); in the event that the Company does not close a share exchange or similar transaction by June 1, 2011, the Lender shall have the right to extend the loan and its terms for up to an additional 6 months (as noted in Note 1 the Exchange Agreement was closed on March 31, 2011); and
- in no event shall the loan be repaid by the Company.

On June 1, 2011 the lender surrendered \$100,000 of the convertible loan in exchange for 81,161 shares of common stock.

On February 20, 2011, the Company received a tax pre-ruling from the Israeli tax authorities according to section 103 of the Israeli tax law, with regards to the share exchange of the Company's shares and options. According to the tax pre-ruling, the shares and options exchange will not result in an immediate tax event for the Company's shareholders, but a deferred tax event, subject to certain conditions as stipulated in the tax pre-ruling. The main condition of the tax pre-ruling is a restriction on the exchanged shares for two years from December 31, 2010 for share holders holding over of 5%.

In March 2011, the Company granted a new fixed lien of \$40,000 to Bank Mizrahi.

Pursuant to the Exchange Agreement described in Note 1 above, the Company assumed all of InspireMD Ltd.'s obligations under InspireMD Ltd.'s outstanding stock options. Immediately prior to the Share Exchange, InspireMD Ltd. had outstanding stock options to purchase an aggregate of 937,256 shares of its ordinary shares, which outstanding options became options to purchase an aggregate of 7,606,770 shares of common stock of the Company after giving effect to the Share Exchange. In addition, three-year warrants to purchase up to 125,000 ordinary shares of InspireMD at an exercise price of \$10 per share were assumed by the Company and converted into warrants to purchase 1,014,500 shares of the Company's common stock at an exercise price of \$1.23 per share.

In connection with the closing of the Exchange Agreement, the Company sold 6,454,002 shares of its common stock at a purchase price of \$1.50 per share and five-year warrants to purchase up to 3,226,999 shares of common stock at an exercise price of \$1.80 per share in a private placement to accredited investors (the "Private Placement"). As part of the Private Placement, certain holders of the 8% convertible debentures, in an aggregate principal amount of \$1,580,000 (the "Bridge Notes"), surrendered \$667,596 of outstanding principal and interest due under such Bridge Notes in exchange for 445,064 shares of common stock and warrants to purchase an aggregate of 225,532 shares of common stock (the "Debt Conversions"). The number of shares of common stock and warrants issued in connection with the Debt Conversions are included in the aggregate figures for the Private Placement. As a result, the Company received aggregate cash proceeds of \$9,013,404 in the Private Placement. In addition, as a result of the Debt Conversions, there was \$1,000,000 of unpaid principal outstanding under the Bridge Notes, which was repaid by the Company in May 2011.

NOTE 5 - CERTAIN TRANSACTIONS (continued):

In connection with the Private Placement, the Company paid placement agent fees of approximately \$300,000 and issued five-year warrants to purchase 373,740 shares of our common stock at an exercise price of \$1.80 per share. The fair value of the warrant is \$212,000.

In connection with the Exchange Agreement, the Company also entered into a stock escrow agreement with certain stockholders, pursuant to which these stockholders deposited 1,015,622 shares of common stock held by them into escrow. These shares will be released to the Company for cancellation or surrender to an entity designated by the Company should the Company have \$10 million in consolidated revenue, as certified by the Company's independent auditors, during the first 12 months following the closing of the Private Placement, yet fail, after a good faith effort, to have the Company's common stock approved for listing on a national securities exchange. On the other hand, should the Company fail to record at least \$10 million in consolidated revenue during the first 12 months following the closing of the Private Placement or have its common stock listed on a national securities exchange within 12 months following the closing on the Private Placement, these escrowed shares shall be released back to the stockholders.

The shares of the Company's common stock issued to the InspireMD shareholders in connection with the Exchange Agreement and the shares of common stock issued to the investors in the Private Placement were not registered under the Securities Act of 1933, as amended. These securities may not be offered or sold in the U.S. absent registration or an applicable exemption from the registration requirements. Certificates representing these shares contain a legend stating the restrictions applicable to such shares.

On March 31, 2011, the Company issued certain consultants five-year warrants to purchase up to an aggregate of 2,500,000 shares of common stock at an exercise price of \$1.50 per share in consideration for consulting services relating to the equity raising transaction, which warrants have a fair value of \$1,500,000. The expenses related to the issuance of the warrants are recorded as share-based compensation and treated as issuance costs.

On April 18, 2011, the Company issued 666,667 shares of its common stock and five-year warrants to purchase 333,333 shares of the Company's common stock at an exercise price of \$1.80 per share, for an aggregate purchase price of \$1,000,000 in a private placement.

On April 18, 2011, the Company issued 283,334 shares of its common stock and five-year term warrants to purchase 141,667 shares of the Company's common stock at an exercise price of \$1.80 per share, for an aggregate purchase price of \$425,000 in a private placement.

In connection with the private placements consummated on April 18, 2011, the Company paid placement agent fees of approximately \$471,000 which was recorded as issuance costs and five-year term warrants to purchase 57,000 shares of the Company common stock at an exercise price of \$1.80 per share. The fair value of those warrants amounting to \$67,000 is estimated using the Black-Scholes valuation model.

NOTE 5 - CERTAIN TRANSACTIONS (continued):

On April 21, 2011, the Company issued 33,333 shares of its common stock, and five-year term warrants to purchase 16,667 shares of the Company's common stock at an exercise price of \$1.80 per share, for an aggregate purchase price of \$50,000 in a private placement.

During the six months period ended June 30, 2011, the Company entered into investor relations consulting agreements (the "Consulting Agreements") with investor relationship companies (the "Advisors") to provide financial advisory services and other investment banking services. Pursuant to the Consulting Agreements, in addition to monthly fees in a range of \$3,000 - \$15,000, the Company will issue to the Advisors:

- a one-year warrant to purchase 81,161 shares of common stock of the Company at an exercise price of \$1.23 per share, valued at \$21,000;
- 50,000 restricted shares of the Company's common stock, valued at \$62,000; and a five-year warrant to purchase 50,000 shares of common stock of the Company at an exercise price of \$1.50 per share, valued at \$30,000.
- 25,000 shares of the Company's common stock, valued at \$68,750.

The Company recorded share-based compensation expenses of \$181,750 related to these issuances, during the six months period ended June 30, 2011.

During the three months period ended June 30, 2011 the Company granted 1,087,225 stock options to employees and consultants at cash exercise prices of \$1.23-\$2.75 per share. The options had terms of five years.

NOTE 6 - FAIR VALUE MEASUREMENT:

The Company measures fair value and discloses fair value measurements for financial assets and liabilities. Fair value is based on the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The accounting standard establishes a fair value hierarchy that prioritizes observable and unobservable inputs used to measure fair value into three broad levels, which are described below:

- Level 1: Quoted prices (unadjusted) in active markets that are accessible at the measurement date for assets or liabilities. The fair value hierarchy gives the highest priority to Level 1 inputs.
 - Level 2: Observable prices that are based on inputs not quoted on active markets, but corroborated by market data.
- Level 3: Unobservable inputs are used when little or no market data is available. The fair value hierarchy gives the lowest priority to Level 3 inputs.

NOTE 6 - FAIR VALUE MEASUREMENT (continued):

In determining fair value, the Company utilizes valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs to the extent possible and considers counterparty credit risk in its assessment of fair value.

The Convertible loan was recorded at a fair value of \$1,044 as of December 31, 2010, then subsequently remeasured at fair value with the increase in fair value of \$624 included in the Consolidated Statements of Operations as of March 31, 2011. This security was measured at fair value on a recurring basis and classified in the "Significant Unobservable inputs (Level 3)" category.

The carrying amounts of cash and cash equivalents, accounts receivable, accounts payable and other accrued liabilities approximate their fair value either because these amounts are presented at fair value or due to the relatively short-term maturities of such instruments. The carrying amount of the Group's other financial long-term assets and other financial long-term liabilities approximate their fair value.

NOTE 7 - INVENTORY ON HAND:

	 June 30 2011	Dec	cember 31, 2010
		(\$ in	thousands)
Finished goods	\$ 318	\$	957
Work in process	1,049		573
Raw materials and supplies	104		174
	\$ 1,471	\$	1,704

NOTE 8 - RELATED PARTIES TRANSACTIONS

In July 2010, the Company's board of directors approved new employment agreements for the Company's President and CEO. The agreements were approved at the Company's shareholders meeting in March 2011, and are effective from April 1, 2011.

NOTE 9 - COMMITMENT AND CONTINGENT LIABILITIES:

Commitment

In March 2010, the Company entered into a license agreement to use a stent design ("MGuard Prime"). Pursuant to the agreement, the licensor is entitled to receive royalty payments of 7% of net sales outside the United States and, for sales within the United States, royalty payments as follows: 7% of net sales for the first \$10,000,000 of net sales and 10% of net sales for net sales exceeding \$10,000,000. The Company began manufacturing the MGuard Prime during the last quarter of 2010 and began selling the MGuard Prime in the first quarter of 2011.

NOTE 9 - COMMITMENTS AND CONTINGENT LIABILITIES (continued):

Litigation

The Company is a party to various claims arising in the ordinary course of its operations in the aggregate amount of \$30,000. The Company has not recorded an expense related to damages in connection with these matters because management, after consultation with its legal counsel, is of the opinion that the ultimate resolution of these claims will not result in a loss to the Company.

In March 2009, a service provider submitted a claim against the Company in the amount of \$150,000 in the Magistrate's Court in Tel Aviv, claiming a success fee for assistance in locating potential investors and lenders with respect to a loan agreement entered into with a bank. On April 11, 2011, the Company received a court ruling directing the Company to pay the service provider an amount of \$105,000. Since both parties had claims against the court ruling, they renegotiated and on June 5, 2011 signed a settlement agreement according to which the Company shall pay \$96,000 and shall issue 18,785 common shares. The Company has recorded a provision of \$96,000 in the financial statements in 2011 and share based compensation of \$51,000. The related expense has been recorded to "General and administrative" within the Condensed Consolidated Statements of Operations.

In November 2010, a former senior employee submitted a claim against the Company in the total amount of \$430,000 and options to purchase 2,029,025 shares of the Company at an exercise price of \$0.001 per share in the Magistrate's Court in Tel Aviv, claiming unpaid back wages and commissions. The fair value of those options was valued using the Black-Scholes valuation model at \$2.5 million as of the period he claimed to be entitled to the options. The Company, based upon the opinion of its legal counsel, has recorded a provision of \$20,000 in the financial statements.

In November 2010, an alleged former founder and legal advisor of the Company submitted a claim against the Company for options to purchase 496,056 shares of the Company at an exercise price of \$0.001 per share in the Magistrate's Court in Tel Aviv. The fair value of those options was valued using the Black-Scholes valuation model at \$178 thousand as of the grant date. The Company, based upon the opinion of its legal counsel, has recorded a share-based compensation expense of \$134,000 allocated to the year ended December 31, 2006, in respect of services allegedly provided in 2005 and 2006.

In November 2010, a former legal advisor of the Company submitted a claim against the Company in the amount of \$53,000 in the Magistrate's Court in Tel Aviv, claiming a breach of terms of employment. The Company, based upon the opinion of its legal counsel has recorded a provision of \$53,000 allocated to the year ended December 31, 2006.

In February 2011, a finder submitted a claim against the Company in the amount of \$327,000 in the Magistrate's Court in Tel Aviv, claiming a future success fee and commission for assistance in finding the Company's distributer in Brazil. The Company, based upon the opinion of its legal counsel, has recorded a provision of \$327,000 in the financial statements in the first quarter of 2011. The related expense has been recorded to "General and administrative" within the Condensed Consolidated Statements of Operations.

In February 2011, representatives of a third party indicated that they intend to seek damages from the Company in connection with certain finders' fees that they claim are owed to them. The claimants' most recent settlement demand, conveyed in April 2011, was for a total of \$250,000 in cash and 250,000 shares of the company common stock. To date no lawsuit has been filed. The Company has not accrued an expense in connection with this matter as management currently is of the opinion that the resolution of this matter will not result in a loss to the Company.

NOTE 10 - TAXES ON INCOME

Amendment of the Law for the Encouragement of Capital Investments, 1959

The Law for Encouragement of Capital Investments, 1959 (the "Law") was amended as part of the Economic Policy Law for the years 2011-2012, which was passed in the Knesset (the Israeli parliament) on December 29, 2010 (the "amendment"). The amendment became effective January 1, 2011.

The amendment sets alternative benefit tracks to the ones currently in place under the provisions of the Law, as follows: investment grants track designed for enterprises located in national development zone A and two new tax benefits tracks (preferred enterprise and a special preferred enterprise), which provide for application of a unified tax rate to all preferred income of the company, as defined in the amendment.

The tax rates at company level, under the Law:

Years	Development Zone A	Other Areas in Israel
"Preferred enterprise":		
2011-2012	10%	15%
2013-2014	7%	12.5%
2015 and thereafter	6%	12%
"Special Preferred Enterprise"		
commencing 2011	5%	8%

The benefits granted to the preferred enterprises will be unlimited in time, unlike the benefits granted to special preferred enterprises, which will be limited for a period of 10 years. The benefits shall be granted to companies that will qualify under criteria set in the amendment; for the most part, those criteria are similar to the criteria that were set in the law prior to its amendment.

Under the transitional provisions of the amendment, a company will be allowed to continue and enjoy the tax benefits available under the Law prior to its amendment until the end of the period of benefits, as defined in the Law. The company will be allowed to set the "year of election" no later than tax year 2012, provided that the minimum qualifying investment commenced not later than the end of 2010. On each year during the period of benefits, the company will be able to opt for application of the amendment, thereby making available to itself the tax rates as above. A company may not revoke it election for application of the Amendment.

In accordance with income taxes (Topic 740) the measurement of current and deferred tax liabilities and assets is based on provisions of the enacted tax law at balance sheet date. The amendment was "enacted" at the first quarter of 2011 and did not have an impact on the company's consolidated financial statements.

NOTE 11 - ENTITY WIDE DISCLOSURE

The Company operates in one reportable segment.

Disaggregated financial data is provided below as follows:

- (1) Revenues by geographic area and
- (2) Revenues from principal customers.

Revenues are attributed to geographic areas based on the location of the customers. The following is a summary of revenues by geographic areas:

	 6 months ended June 30				3 mont Ju	Year ended December 31

All tangible long lived assets are located in Israel.

NOTE 12 - SUBSEQUENT EVENTS

On July 11, 2011, the Board appointed a new director with a term expiring at the Company's 2012 annual meeting of stockholders. In connection with his appointment, the director was granted an option to purchase 1,000,000 shares of the Company's common stock ("Common Stock") at an exercise price of \$1.50 per share. The option is exercisable from the date of grant and expires on September 30, 2011. In addition, in connection with his appointment, the director was granted an option to purchase 500,000 shares of Common Stock at an exercise price of \$2.50 per share, the closing price of the Common Stock on the date of grant, subject to the terms and conditions of the 2011 U.S. Equity Incentive Plan, a sub-plan of the Company's 2011 new Option Plan approved on March 28, 2011 ("2011 Umbrella Option Plan"). This option vests and becomes exercisable in two equal annual installments beginning on the one-year anniversary of the date of grant, provided that in the event that the director is either (i) not reelected as a director at the Company's 2012 annual meeting of stockholders, or (ii) not nominated for reelection as a director at the Company's 2012 annual meeting of stockholders, the option vests and becomes exercisable on the date of the director fails to be reelected or nominated. This option has a term of 10 years from the date of grant. The aggregate fair value of the options granted to the above-mentioned new director is approximately \$1,600,000.

On August 5, 2011, the Board appointed a new director, effective as of August 8, 2011. The director was appointed for a term expiring at the Company's 2012 annual meeting of stockholders. The director was granted an option to purchase 100,000 shares of Common Stock at an exercise price of \$1.95 per share, the closing price of the Common Stock on the date of grant, subject to the terms and conditions of the 2011 U.S. Equity Incentive Plan, a sub-plan of the Company's 2011 Umbrella Option Plan. The option vests and become exercisable in two equal annual installments beginning on the one-year anniversary of the date of grant and expires ten years from the date of grant. In the event that the director is either (i) not reelected as a director at the Company's 2012 annual meeting of stockholders, or (ii) not nominated for reelection as a director at the Company's 2012 annual meeting of stockholders, the option vests and becomes exercisable on the date of the director's failure to be reelected or nominated.

On August 5, 2011, the Board appointed another new director, effective as of August 8, 2011. The director was appointed for a term expiring at the Company's 2013 annual meeting of stockholders. The director was granted an option to purchase 25,000 shares of Common Stock at an exercise price of \$1.95 per share, the closing price of the Common Stock on the date of grant, subject to the 2006 Employee Stock Option Plan, a sub-plan of the Company's 2011 Umbrella Option Plan. The option vests and become exercisable in two equal annual installments beginning on the one-year anniversary of the date of grant and expires ten years from the date of grant. In the event that the director is required to resign from the Board due to medical reasons, the option vests and becomes exercisable on the date of the director's resignation for medical reasons.

In addition, on August 5, 2011, the Board approved the grant of options to purchase 486,966 shares of Common Stock to former directors at a cash exercise price of \$1.23 per share. The options replaced comparable options held by the former directors that had expired during the second quarter of 2011. The options had terms of five years.

On July 20, 2011 Mizrahi Tefahot Bank approved the release of the fixed lien in the amount of \$300 thousand. Following the approval, \$300 thousand of Restricted Cash will be classified as Cash and Cash Equivalents.

NOTE 12 - SUBSEQUENT EVENTS (continued)

In August 2011, a former senior employee submitted to the Regional Labor Court in Tel Aviv a claim against the Company for (i) a compensation of \$118,000; (ii) declaratory ruling that he is entitled to exercise 486,966 options to purchase InspireMD, Inc's shares of common stock at an exercise price of \$0.001 per option. After consulting with counsel, the Company is unable to assess the outcome of this claim.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of our financial condition and results of operations should be read in conjunction with the accompanying condensed consolidated financial statements and related notes included elsewhere in this Quarterly Report on Form 10-Q.

Unless the context requires otherwise, references in this Form 10-Q to the "Company," "InspireMD," "we," "our" and "us" for periods prior to the closing of the share exchange on March 31, 2011 refer to InspireMD Ltd., a privately held Israeli limited company that is now our wholly-owned subsidiary, and references to the "Company," "InspireMD," "we," "our" and "us" for periods subsequent to the closing of the share exchange on March 31, 2011, refer to InspireMD, Inc., a Delaware corporation, and its subsidiaries.

Forward-Looking Statements

This Form 10-Q contains "forward-looking statements," which include information relating to future events, future financial performance, strategies, expectations, competitive environment and regulation. Words such as "may," "should," "could," "would," "predicts," "potential," "continue," "expects," "anticipates," "future," "intends," "plans," "believes," "estimates," and similar expressions, as well as statements in future tense, identify forward-looking statements. Forward-looking statements should not be read as a guarantee of future performance or results and will probably not be accurate indications of when such performance or results will be achieved. Forward-looking statements are based on information we have when those statements are made or our management's good faith belief as of that time with respect to future events, and are subject to risks and uncertainties that could cause actual performance or results to differ materially from those expressed in or suggested by the forward-looking statements. Important factors that could cause such differences include, but are not limited to:

- adverse economic conditions and/or intense competition;
- loss of a key customer or supplier;
- entry of new competitors and products;
- adverse federal, state and local government regulation, in the U.S., Europe or Israel;
- failure to adequately protect our intellectual property;
- inadequate capital;
- technological obsolescence of our products;
- technical problems with our research and products;
- price increases for supplies and components;
- inability to carry out research, development and commercialization plans;
- loss or retirement of key executives and research scientists and other specific risks;
- the uncertainty regarding the adequacy of our liquidity to pursue our complete business objectives; and
- a product recall or voluntary market withdrawal due to product defects or product enhancements and modifications.

You should review carefully "Part II – Item 1A. Risk Factors" of this Form 10-Q for a discussion of these and other risks that relate to our business and investing in shares of our common stock.

Overview

We are a medical device company focusing on the development and commercialization of our proprietary stent platform technology, MGuardTM. MGuardTM provides embolic protection in stenting procedures by placing a micron mesh sleeve over a stent. Our initial products are marketed for use mainly in patients with acute coronary syndromes, notably acute myocardial infarction (heart attack) and saphenous vein graft coronary interventions (bypass surgery).

On March 31, 2011, we completed a series of share exchange transactions pursuant to which we acquired all of the capital stock of InspireMD Ltd., a company formed under the laws of the State of Israel, in exchange for an aggregate of 50,666,663 shares of our common stock. As a result of these share exchange transactions, InspireMD Ltd. became our wholly-owned subsidiary, we discontinued our former business and succeeded to the business of InspireMD Ltd. as our sole line of business.

The share exchange transactions are being accounted for as a recapitalization. InspireMD Ltd. is the acquirer for accounting purposes and we are the acquired company. Accordingly, the historical financial statements presented and the discussion of financial condition and results of operations herein are those of InspireMD Ltd., retroactively restated for, and giving effect to, the number of shares received in the share exchange transactions, and do not include the historical financial results of our former business. The accumulated earnings of InspireMD Ltd. were also carried forward after the share exchange transactions and earnings per share have been retroactively restated to give effect to the recapitalization for all periods presented. Operations reported for periods prior to the share exchange transactions are those of InspireMD Ltd.

Critical Accounting Policies

Use of estimates

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of sales and expenses during the reporting periods. Actual results could differ from those estimates.

As applicable to these consolidated financial statements, the most significant estimates and assumptions relate to revenue recognition including provision for returns, legal contingencies and estimation of the fair value of share-based compensation and convertible debt.

Functional currency

The currency of the primary economic environment in which our operations are conducted is the United States dollar ("\$" or "dollar"). Accordingly, the functional currency of us and of our subsidiaries is the dollar.

The dollar figures are determined as follows: transactions and balances originally denominated in dollars are presented in their original amounts. Balances in foreign currencies are translated into dollars using historical and current exchange rates for non-monetary and monetary balances, respectively. The resulting translation gains or losses are recorded as financial income or expense, as appropriate. For transactions reflected in the statements of operations in foreign currencies, the exchange rates at transaction dates are used. Depreciation and changes in inventories and other changes deriving from non-monetary items are based on historical exchange rates.

Fair value measurement

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

In determining fair value, we use various valuation approaches, including market, income and/or cost approaches. Hierarchy for inputs is used in measuring fair value that maximizes the use of observable inputs and minimizes the use of unobservable inputs by requiring that the most observable inputs be used when available. Observable inputs are inputs that market participants would use in pricing the asset or liability developed based on market data obtained from sources independent of us. Unobservable inputs are inputs that reflect our assumptions about the assumptions market participants would use in pricing the asset or liability developed based on the best information available in the circumstances. The hierarchy is broken down into three levels based on the reliability of inputs.

Concentration of credit risk and allowance for doubtful accounts

Financial instruments that may potentially subject us to a concentration of credit risk consist of cash, cash equivalents and restricted cash which are deposited in major financial institutions in Germany and Israel, and trade accounts receivable. Our trade accounts receivable are derived from revenues earned from customers from various countries. We perform ongoing credit evaluations of our customers' financial condition and, generally, require no collateral from our customers. We also have a credit insurance policy for some of our customers. We maintain an allowance for doubtful accounts receivable based upon the expected ability to collect the accounts receivable. We review our allowance for doubtful accounts quarterly by assessing individual accounts receivable and all other balances based on historical collection experience and an economic risk assessment. If we determine that a specific customer is unable to meet its financial obligations to us, we provide an allowance for credit losses to reduce the receivable to the amount our management reasonably believes will be collected. To mitigate risks, we deposit cash and cash equivalents with high credit quality financial institutions. Provisions for doubtful debts are netted against "Accounts receivable-trade."

Inventory

Inventories include finished goods, work in process and raw materials. Inventories are stated at the lower of cost (cost is determined on a "first-in, first-out" basis) or market value. Inventories are stated at the lower of cost or market. Our inventories generally have a limited shelf life and are subject to impairment as they approach their expiration dates. We regularly evaluate the carrying value of our inventories and when, in our opinion, factors indicate that impairment has occurred, we establish a reserve against the inventories' carrying value. Our determination that a valuation reserve might be required, in addition to the quantification of such reserve, requires us to utilize significant judgment. Although we make every effort to ensure the accuracy of forecasts of future product demand, any significant unanticipated decreases in demand could have a material impact on the carrying value of our inventories and reported operating results. To date, inventory adjustments have not been material. In respect to inventory on consignment, see "Revenue recognition" below.

Revenue recognition

Revenue is recognized when delivery has occurred, evidence of an arrangement exists, title and risks and rewards for the products are transferred to the customer, collection is reasonably assured and when product returns can be reliably estimated. When product returns can be reliably estimated a provision is recorded, based on historical experience, and deducted from sales. The provision for sales returns and related costs are included in "Accounts payable and accruals - Other" under "current liabilities", and "Inventory on consignment", respectively.

When returns cannot be reliably estimated, both revenues and related direct costs are eliminated, as the products are deemed unsold. Accordingly, both related revenues and costs are deferred, and presented under "Deferred revenues" and "Inventory on consignment", respectively.

We recognize revenue net of value added tax (VAT).

Research and development costs

Research and development costs are charged to the statement of operations as incurred.

Share-based compensation

Employee option awards are classified as equity awards and accounted for using the grant-date fair value method. The fair value of share-based awards is estimated using the Black-Scholes valuation model, which is expensed over the requisite service period, net of estimated forfeitures. We estimate forfeitures based on historical experience and anticipated future conditions.

We elected to recognize compensation expensed for awards with only service conditions that have graded vesting schedules using the accelerated multiple option approach.

We account for equity instruments issued to third party service providers (non-employees) by recording the fair value of the options granted using an option pricing model, at each reporting period, until rewards are vested in full. The expense is recognized over the vesting period using the accelerated multiple option approach. The expense relates to options granted to third party service providers with respect to successful investor introductions that are recorded at their fair value in equity, as issuance costs.

Uncertain income tax positions

We follow a two-step approach to recognizing and measuring uncertain income tax positions. The first step is to evaluate the income tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit. The second step is to measure the income tax benefit as the largest amount that is more than 50% and 75%, respectively, likely of being realized upon ultimate settlement. Such liabilities are classified as long-term, unless the liability is expected to be resolved within twelve months from the balance sheet date. Our policy is to include interest and penalties related to unrecognized tax benefits within financial expenses.

Results of Operations

Three Months Ended June 30, 2011 Compared to the Three Months Ended June 30, 2010

Revenues. For the three months ended June 30, 2011, total revenue increased approximately \$0.1 million, or 14.5%, to approximately \$1.0 million from approximately \$0.9 million during the same period in 2010. Our revenue is comprised mainly of two components, gross revenue less net deferred revenue. Gross revenue is equal to the dollar value of shipments actually made to customers. This amount is offset by net deferred revenue. Revenue's is recognized when delivery has occurred, evidence of an arrangement exists, title and risks and rewards of the products are transferred to the customer, collection is reasonably assured and when product returns can be reliably estimated. When product returns can be reliably estimated, a provision is recorded based on historical experience, and deducted from sales. Since we only commenced selling products in 2008, revenue derived from shipments in the past has not been immediately recognized. Rather, such amounts have been recognized as deferred revenue on our balance sheet. Once the estimated time period for returns elapses, the deferred revenue is removed from the balance sheet and recognized as revenue in the statement of operations. On a going forward basis, the majority of shipments will be immediately recognized as revenue. The following is an explanation of the approximately \$0.1 million increase in revenue broken down by its main two components, an increase in gross revenue of approximately \$0.3 million and a net decrease in deferred revenue of approximately \$0.2 million.

For the three months ended June 30, 2011, total gross revenue increased by approximately \$0.3 million, or 73.5%, to approximately \$0.7 million from approximately \$0.4 million during the same period in 2010. The increase in gross revenue is primarily due to approximately \$0.1 million of first time sales to our distributor in the Netherlands, approximately \$0.1 million of increased gross revenue from our distributor in Israel, approximately \$0.1 million of increased gross revenue from our distributor in Germany, and approximately \$0.1 million of increased gross revenue from our distributor in Argentina, offset by approximately \$0.1 million less gross revenue from our distributor in Poland and approximately \$0.1 million less gross revenue for approximately \$0.1 million more from our remaining distributors during the three months ended June 30, 2011, as compared to the same period in 2010.

For the three months ended June 30, 2011, we recognized net deferred revenue of approximately \$0.3 million, as compared to approximately \$0.5 million in the corresponding period in 2010. The decrease of approximately \$0.2 million is attributable to approximately \$0.3 million less deferred revenue recognized from sales made in Brazil offset by approximately a \$0.2 million increase in deferred revenue from sales made in Israel. We also recognized deferred revenue for approximately \$0.1 million less from our remaining distributors during the three months ended June 30, 2011, as compared to the same period in 2010.

Gross Profit. For the three months ended June 30, 2011, gross profit (revenue less cost of revenues) decreased approximately 6.8%, or approximately \$30,000, to approximately \$0.4 million from approximately \$0.43 million during the same period in 2010. Gross margin decreased to 38.5% for the three months ended June 30, 2011, from 47.2% during the same time period in 2010. For the three months ended June 30, 2011, our average selling price per stent recognized in revenue was \$566, and we recognized the sale of 1,836 stents, compared to an average price of \$590 per stent and 1,538 stents recognized in revenue for the same period in 2010. Our production cost per stent increased from an average of \$311 per stent recognized in revenue for the three months ended June 30, 2010 to an average of \$349 per stent for the same period in 2011. The costs per stent, in addition to raw materials, includes salary expenses denominated in NIS. For the three months ended June 30, 2011, there was an increase in labor costs per stent. The increase was due to share based compensation during the current period and an approximately 10% appreciation of the NIS against the U.S. dollar in the current period versus the same period in the prior year.

Research and Development Expense . For the three months ended June 30, 2011, research and development expense increased 101.6% to approximately \$0.8 million, from approximately \$0.4 million during the same period in 2010. The increase in cost resulted primarily from approximately \$0.5 million higher clinical trial expenses, attributable mainly to our FDA clinical trial (approximately \$0.4 million) and our Master Trial (approximately \$0.1 million), offset by approximately \$0.1 million lower share based compensation expense. Research and development expense as a percentage of revenue increased to 72.1% in 2011 from 41.0% in 2010.

Selling and Marketing Expense. For the three months ended June 30, 2011, selling and marketing expense increased 103.0% to approximately \$0.6 million, from approximately \$0.3 million during the same period in 2010. The increase in cost resulted primarily from approximately \$0.2 million of additional salaries and related expenses of newly hired sales personnel as we expand our sales activities worldwide and approximately \$0.1 million of additional share base compensation. Selling and marketing expense as a percentage of revenue increased to 59.3% in 2011 from 33.5% in 2010.

General and Administrative Expense . For the three months ended June 30, 2011, general and administrative expense increased 172.6% to approximately \$1.2 million from \$0.4 million during the same period in 2010. The increase in cost resulted primarily from an increase in investor related activities of approximately \$0.2 million, an increase in legal and litigation expense of approximately \$0.15 million, an increase in salary expense of approximately \$0.1 million in travel expenses, an increase of approximately \$0.1 million in accounting fees, and an increase of approximately \$0.1 in miscellaneous expenses. General and administrative expense as a percentage of revenue increased to 115.9% in 2011 from 48.7% in 2010.

Financial Expenses/Income. For the three months ended June 30, 2011, we had financial expense of approximately \$72,000, compared to approximately \$41,000 of financial income during the same period in 2010. The increase in financial expense resulted primarily from the favorable impact of exchange rate differences for the three months ended June 30, 2011 that did not reoccur during the three months ended June 30, 2011. Financial expense as a percentage of revenue was 6.9% in 2011, compared to financial income of 4.5% in 2010.

Tax Expenses. Tax expense remained relatively flat at \$10,000 for the three months ended June 30, 2011 as compared to \$15,000 during the same period in 2010. Our expenses for income taxes reflect primarily the tax liability due to potential tax exposure.

Net Loss. Our net loss increased approximately \$1.6 million, or 240.0%, to approximately \$2.3 million for the three months ended June 30, 2011 from approximately \$0.7 million during the same period in 2010. The increase in net loss resulted primarily from an increase in operating expenses of approximately \$1.5 million (see above for explanations) and an increase of approximately \$0.1 million in financial expenses (see above for explanation).

Backlog. Our order backlog as of June 30, 2011 was approximately \$0.9 million.

Six Months Ended June 30, 2011 Compared to the Six Months Ended June 30, 2010

Revenues. For the six months ended June 30, 2011, total revenue decreased approximately \$0.3 million, or 9.3%, to approximately \$2.7 million from approximately \$3.0 million during the same period in 2010. The following is an explanation of the approximately \$0.3 million decrease in revenue broken down by its main two components, a net decrease in deferred revenue of approximately \$1.4 million and an increase in gross revenue of approximately \$1.15 million.

For the six months ended June 30, 2011, net deferred revenue decreased by approximately \$1.4 million, or 79.8%, to approximately \$0.4 million from approximately \$1.8 million during the same period in 2010. For the six months ended June 30, 2011, our net deferred revenue consisted of approximately \$0.2 million attributable to our distributor in Israel, approximately \$0.1 million to our distributor in Brazil, approximately \$0.05 million to our distributor in Italy, and approximately \$0.1 million to our distributor in Poland, offset by approximately \$0.1 million deferred for a shipment to our distributor in India. For the first half of 2010, net deferred revenue of approximately \$1.8 million was comprised mainly of shipments from 2008 and 2009 to our distributor in Poland of approximately \$1.1 million, our distributor in Brazil of approximately \$0.4 million, to our distributor in Sri Lanka of approximately \$0.1 million and approximately \$0.2 million to miscellaneous distributors.

For the six months ended June 30, 2011, total gross revenue increased by approximately \$1.15 million, or 93.0%, to approximately \$2.4 million from approximately \$1.2 million during the same period in 2010. This increase in gross revenue is mainly attributable to the first time shipment of approximately \$1.2 million to our distributor in India during the first half of 2011, an increase of approximately \$0.1 million of gross revenue to our distributor in Spain, an increase of approximately \$0.1 million of gross revenue to our new distributor in the Netherlands, an increase of approximately \$0.1 million of gross revenue to our distributor in Columbia and approximately \$0.1 million of gross revenue to our distributor in Israel. This increase was partially offset by a decrease of approximately \$0.4 million in gross revenue to our distributor in Poland, a decrease of approximately \$0.2 million in gross revenue to our distributor in Kazakhstan, and a decrease of approximately \$0.1 million in gross revenue to our distributor in Kazakhstan, and a decrease of approximately \$0.1 million in gross revenue for approximately \$0.2 million more from our remaining distributors during the six months ended June 30, 2011, as compared to the same period in 2010.

Gross Profit . For the six months ended June 30, 2011, gross profit (revenue less cost of revenues) decreased approximately 0.2%, or approximately \$2,000, to approximately \$1.187 million from approximately \$1.189 million during the same period in 2010. Gross margin increased from 39.6% in the six months ended June 30, 2010 to 43.5% in the six months ended June 30, 2011. We were able to improve our gross margin in spite of our decrease in revenue because of reduced production cost per stent driven by economies of scale. For the six months ended June 30, 2011, our average selling price per stent recognized in revenue was \$555, and we recognized the sale of 4,915 stents, compared to an average price of \$672 per stent and 4,473 stents recognized in revenue for the same period in 2010. Our production cost per stent decreased from an average of \$406 per stent recognized in revenue for the six months ended June 30, 2010 to an average of \$313 per stent for the same period in 2011. The higher price per stent for the six months ended June 30, 2010 was affected by the price of stents sold in 2008 and 2009 to one of our Europeans distributors in Euros when the Euro was much stronger than the U.S. dollar, at an average price of \$997 when translated to U.S. dollars.

Research and Development Expense . For the six months ended June 30, 2011, research and development expense increased 41.4% to approximately \$1.1 million from approximately \$0.8 million during the same period in 2010. The increase in cost resulted primarily from higher clinical trial expenses of approximately \$0.5 million, attributable mainly to the FDA clinical trial (approximately \$0.4 million) and the Master Trial (approximately \$0.1 million), offset by approximately \$0.1 million of development cost for MGuard Prime in the first six months of 2010 and approximately \$0.1 million of lower share based compensation expense in the three months ended June 30, 2011. Research and development expense as a percentage of revenue increased to 40.1% for the six months ended June 30, 2011 from 25.7% in the same period of 2010.

Selling and Marketing Expense. For the six months ended June 30, 2011, selling and marketing expense increased 64.1% to approximately \$1.0 million, from approximately \$0.6 million during the same period in 2010. The increase in cost resulted primarily from approximately \$0.2 million of additional share base compensation, approximately \$0.1 million of commissions pertaining to our first time shipment of approximately \$1.2 million to our distributor in India, and approximately \$0.1 million of additional salaries and related expenses of newly hired sales personnel as we expand our sales activities worldwide. Selling and marketing expense as a percentage of revenue increased to 38.3% in 2011 from 21.2% in 2010.

General and Administrative Expense . For the six months ended June 30, 2011, general and administrative expense increased 115.0% to approximately \$2.4 million from \$1.1 million during the same period in 2010. The increase in cost resulted primarily from an increase in legal and litigation expense of approximately \$0.6 million (primarily due to a provision for the Company's potential loss regarding a threatened lawsuit from a finder claiming a future success fee and commissions for assistance in finding the Company's distributor in Brazil), an increase in investor related activities of approximately \$0.3 million (due to the Company having been public during the six months ended June 30, 2011, but not during the same period in 2010), an increase in travel expense of approximately \$0.2 million (incurred in connection with the share exchange transactions), an increase of approximately \$0.2 million in salary expenses (due to an increase in infrastructure to accommodate and comply with SEC standards and reporting), and an increase of approximately \$0.1 million in accounting fees (also related to compliance with SEC standards), offset by a non-recurring bad debt provision in the amount of approximately \$0.1 million made during the first half of 2010 mainly related to shipments to our Bulgarian distributor. General and administrative expense as a percentage of revenue increased to 87.7% in 2011 from 37.0% in 2010.

Financial Expenses. For the six months ended June 30, 2011, financial expense increased to approximately \$0.8 million from \$29,000 during the same period in 2010. The increase in expense resulted primarily from a one-time financial expense recording of approximately \$0.6 million in the first quarter of 2011 pertaining to the revaluation of the outstanding convertible loan at fair value prior to redemption and approximately \$0.2 million for the favorable impact of exchange rate differences for the six months ended June 30, 2010 that did not reoccur during the six months ended June 30, 2011. Financial expense as a percentage of revenue decreased to 28.9% in 2011, from 1.0% in 2010.

Tax Expenses. Tax expense remained relatively flat at \$20,000 for the six months ended June 30, 2011, as compared to \$30,000 during the same period in 2010. Our expenses for income taxes reflect primarily the tax liability due to potential tax exposure.

Net Loss. Our net loss increased approximately \$2.8 million, or 198.1%, to \$4.2 million for the six months ended June 30, 2011 from \$1.4 million during the same period in 2010. The increase in net loss resulted primarily from an increase in operating expenses of approximately \$2.0 million (see above for explanations) and an increase of approximately \$0.8 million in financial expenses (see above for explanation).

Backlog. Our order backlog as of June 30, 2011 was approximately \$0.9 million.

Liquidity and Capital Resources

General. At June 30, 2011, we had cash and cash equivalents of approximately \$8.1 million, as compared to \$0.6 million at December 31, 2010. The increase is attributable primarily to the private placement conducted in conjunction with the reverse merger on March 31, 2011. We have historically met our cash needs through a combination of issuance of new shares, borrowing activities and sales. Our cash requirements are generally for product development, clinical trials, marketing and sales activities, finance and administrative cost, capital expenditures and overall working capital.

Cash used in our operating activities was approximately \$1.8 million for the six months ended June 30, 2011, and approximately \$1.2 million for the same period in 2010. The principal reasons for the decrease include a net loss of approximately \$4.1 million offset by approximately \$1.0 million in non-cash share based compensation, approximately \$0.6 million in non-cash financial expenses related to the revaluation of the convertible loan and approximately \$0.6 million increase in working capital.

We used cash in investing activities of approximately \$0.1 million during the six months ended June 30, 2011, compared to approximately \$24,000 of cash provided by investing activities during the same period in 2010. The principal reason for the decrease in cash flow from investing activities was an increase in restricted cash of approximately \$93,000 (\$50,000 due to a requirement pertaining to our outstanding loan, which was cancelled subsequent to June 30, 2011, and \$43,000 as a guarantee for our credit limit on our corporate credit card).

Cash flow generated from financing activities was approximately \$9.4 million for the six months ended June 30, 2011, and \$1.2 million for the same period in 2010. The principal reason for the increase in cash flow from financing activities during 2011 was the private placement conducted in conjunction with the reverse merger on March 31, 2011 and other private equity issuances prior to and after the reverse merger in the aggregate amount of approximately \$10.6 million, offset by the repayment of the non-converted portion of the convertible loan in the amount of approximately \$1.0 million and the partial repayment of our long-term loan in the amount of approximately \$0.2 million.

As of June 30, 2011, our current assets exceeded current liabilities by 2.8 times. Current assets increased approximately \$6.9 million during 2011, mainly due to cash from the private placements in 2011, while current liabilities decreased by \$25,000 during the same period. As a result, our working capital surplus increased by approximately \$7.0 million to approximately \$6.9 million during the first quarter of 2011.

Credit Facilities. As of June 30, 2011, we had a long term loan in the amount of approximately \$0.3 million bearing interest at the three month US\$ libor rate plus 4% per annum. The loan is payable in eight quarterly installments during a period of three years that begin in April 2010 and ends in January 2012. According to the loan agreement, in case of an "exit transaction," we will be required to pay to the bank an additional \$0.25 million if the sum received in a "liquidity event" or the value of the company in an "IPO" is higher than \$100 million.

Convertible Loan. Prior to June 30, 2011, we had a convertible loan with an aggregate principal amount outstanding of approximately \$1.58 million that bore 8% interest. Following the reverse merger on March 31, 2011, \$580,000 plus accrued interest converted into shares of the Company. The remaining principle in the amount of \$1.0 million was repayed on May 15, 2011.

Sales of Stock. For the six months ended June 30, 2011, we issued an aggregate of 8,321,360 ordinary shares and 3,718,667 warrants for gross proceeds of approximately \$12,246 thousand.

Off Balance Sheet Arrangements

We have no off-balance sheet transactions, arrangements, obligations (including contingent obligations), or other relationships with unconsolidated entities or other persons that have, or may have, a material effect on our financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources.

Recent Accounting Pronouncements

In October 2009, the Financial Accounting Standards Board ("FASB") issued amendments to the accounting and disclosure for revenue recognition. These amendments, effective for fiscal years beginning on or after June 15, 2010 (early adoption is permitted), modify the criteria for recognizing revenue in multiple element arrangements and require companies to develop a best estimate of the selling price to separate deliverables and allocate arrangement consideration using the relative selling price method. Additionally, the amendments eliminate the residual method for allocating arrangement considerations. The Company does not expect the standard to have material effect on its consolidated financial statements.

In January 2010, the FASB updated the "Fair Value Measurements Disclosures". More specifically, this update will require (a) an entity to disclose separately the amounts of significant transfers in and out of Levels 1 and 2 fair value measurements and to describe the reasons for the transfers; and (b) information about purchases, sales, issuances and settlements to be presented separately (i.e. present the activity on a gross basis rather than net) in the reconciliation for fair value measurements using significant unobservable inputs (Level 3 inputs). This update clarifies existing disclosure requirements for the level of disaggregation used for classes of assets and liabilities measured at fair value, and require disclosures about the valuation techniques and inputs used to measure fair value for both recurring and nonrecurring fair value measurements using Level 2 and Level 3 inputs. This will become effective as of the first interim or annual reporting period beginning after December 15, 2009, except for the gross presentation of the Level 3 roll forward information, which is required for annual reporting periods beginning after December 15, 2010 and for interim reporting periods within those years. The adoption of the new guidance did not have a material impact on the Company's consolidated financial statements.

In May 2011, the FASB issued amended guidance and disclosure requirements for fair value measurements. These changes will be effective January 1, 2012 on a prospective basis. Early application is not permitted. These amendments are not expected to have a material impact to the consolidated financial results.

Item 4. Controls and Procedures

Management's Conclusions Regarding Effectiveness of Disclosure Controls and Procedures

As of June 30, 2011, we conducted an evaluation, under the supervision and participation of management including our chief executive officer and chief financial officer, of the effectiveness of our disclosure controls and procedures (as defined in Rule 13a-15(e) and Rule 15d-15 (e) of the Securities Exchange Act of 1934, as amended). There are inherent limitations to the effectiveness of any system of disclosure controls and procedures. Accordingly, even effective disclosure controls and procedures can only provide reasonable assurance of achieving their control objectives.

Based upon this evaluation, our chief executive officer and chief financial officer concluded that our disclosure controls and procedures are effective at the reasonable assurance level as of June 30, 2011.

Changes in Internal Control over Financial Reporting

There were no changes in our internal control over financial reporting during the first quarter that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II - OTHER INFORMATION

Item 1A. Risk Factors

There are numerous and varied risks, known and unknown, that may prevent us from achieving our goals. You should carefully consider the risks described below and the financial and other information included in this Form 10-Q, and our registration statement on Form S-1 filed with the Securities and Exchange Commission on June 16, 2011, as may be amended. If any of the following risks, or any other risks not described below, actually occur, it is likely that our business, financial condition, and/or operating results could be materially adversely affected, and actual outcomes may vary materially from those included in this Form 10-Q.

Risks Related to Our Business

We expect to derive our revenue from sales of our MGuard TM stent products and other products we may develop. If we fail to generate revenue from this source, our results of operations and the value of our business would be materially and adversely affected.

We expect our revenue to be generated from sales of our MGuardTM stent products and other products we may develop. Future sales of these products, if any, will be subject to the receipt of regulatory approvals and commercial and market uncertainties that may be outside our control. If we fail to generate such revenues, our results of operations and the value of our business and securities could be materially and adversely affected.

Several factors could limit the successful commercialization of our products, including:

- limited market acceptance or familiarity among patients, physicians, medical centers and third-party purchasers;
- inadequate reimbursement for our products by third party payors;
- our inability to develop a sales force or distributors capable of effectively marketing our products;
- our inability to manufacture and supply a sufficient amount of products to meet market demands;
- the number, relative effectiveness, and cost of competing products that may enter the market; and
- a product recall or voluntary market withdrawal due to product defects or product enhancements and modifications.

The foregoing factors could also limit the successful commercialization by any future licensee of products incorporating our technology, which would ultimately affect our results of operations.

If we are unable to obtain and maintain intellectual property protection covering our products, others may be able to make, use or sell our products, which would adversely affect our revenue.

Our ability to protect our products from unauthorized or infringing use by third parties depends substantially on our ability to obtain and maintain valid and enforceable patents. Due to evolving legal standards relating to the patentability, validity and enforceability of patents covering medical devices and pharmaceutical inventions and the scope of claims made under these patents, our ability to enforce patents is uncertain and involves complex legal and factual questions. Accordingly, rights under any of our pending patents may not provide us with commercially meaningful protection for our products or afford a commercial advantage against our competitors or their competitive products or processes. In addition, patents may not be issued from any pending or future patent applications owned by or licensed to us, and moreover, patents that may be issued to us in the future may not be valid or enforceable. Further, even if valid and enforceable, our patents may not be sufficiently broad to prevent others from marketing products like ours, despite our patent rights.

The validity of our patent claims depends, in part, on whether prior art references exist that describe or render obvious our inventions as of the filing date of our patent applications. We may not have identified all prior art, such as U.S. and foreign patents or published applications or published scientific literature, that could adversely affect the patentability of our pending patent applications. For example, patent applications in the U.S. are maintained in confidence for up to 18 months after their filing. In some cases, however, patent applications remain confidential in the U.S. Patent and Trademark Office for the entire time prior to issuance as a U.S. patent. Patent applications filed in countries outside the U.S. are not typically published until at least 18 months from their first filing date. Similarly, publication of discoveries in the scientific or patent literature often lags behind actual discoveries. Therefore, we cannot be certain that we were the first to invent, or the first to file patent applications relating to, our stent technologies. In the event that a third party has also filed a U.S. patent application covering our stents or a similar invention, we may have to participate in an adversarial proceeding, known as an interference, declared by the U.S. Patent and Trademark Office to determine priority of invention in the U.S. It is possible that we may be unsuccessful in the interference, resulting in a loss of some portion or all of our position in the U.S. The laws of some foreign jurisdictions do not protect intellectual property rights to the same degree as in the U.S., and many companies have encountered significant difficulties in protecting and defending such rights in foreign jurisdictions. Our business prospects could be substantially harmed.

We may initiate litigation to enforce our patent rights on any patents issued on pending patent applications, which may prompt adversaries in such litigation to challenge the validity, scope or enforceability of our patents. If a court decides that such patents are not valid, not enforceable or of a limited scope, we may not have the right to stop others from using our inventions. Also, even if our patents are determined by a court to be valid and enforceable, they may not be sufficiently broad to prevent others from marketing products similar to ours or designing around our patents, despite our patent rights, nor provide us with freedom to operate unimpeded by the patent rights of others.

We also rely on trade secret protection to protect our interests in proprietary know-how and for processes for which patents are difficult to obtain or enforce. We may not be able to protect our trade secrets adequately. In addition, we rely on non-disclosure and confidentiality agreements with employees, consultants and other parties to protect, in part, trade secrets and other proprietary technology. These agreements may be breached and we may not have adequate remedies for any breach. Moreover, others may independently develop equivalent proprietary information, and third parties may otherwise gain access to our trade secrets and proprietary knowledge. Any disclosure of confidential data into the public domain or to third parties could allow competitors to learn our trade secrets and use the information in competition against us.

We have a history of net losses and may experience future losses

To date, we have experienced net losses. A substantial portion of the expenses associated with our manufacturing facilities are fixed in nature (i.e., depreciation) and will reduce our operating margin until such time, if ever, as we are able to increase utilization of our capacity through increased sales of our products. The clinical trials necessary to support our anticipated growth will be expensive and lengthy. In addition, our strategic plan will require a significant investment in clinical trials, product development and sales and marketing programs, which may not result in the accelerated revenue growth that we anticipate. As a result, there can be no assurance that we will ever generate substantial revenues or sustain profitability.

We have limited manufacturing capabilities and manufacturing personnel, and if our manufacturing facilities are unable to provide an adequate supply of products, our growth could be limited and our business could be harmed.

We currently manufacture our MGuardTM stent at our facilities in Tel Aviv, Israel, and we have contracted with QualiMed Innovative Medizinprodukte GmbH, a German manufacturer, to assist in production. If there were a disruption to our existing manufacturing facility, we would have no other means of manufacturing our MGuardTM stent until we were able to restore the manufacturing capability at our facility or develop alternative manufacturing facilities. If we were unable to produce sufficient quantities of our MGuardTM stent for use in our current and planned clinical trials, or if our manufacturing process yields substandard stents, our development and commercialization efforts would be delayed.

We currently have limited resources, facilities and experience to commercially manufacture our product candidates. In order to produce our MGuardTM stent in the quantities that we anticipate will be required to meet anticipated market demand, we will need to increase, or "scale up," the production process by a significant factor over the current level of production. There are technical challenges to scaling-up manufacturing capacity, and developing commercial-scale manufacturing facilities will require the investment of substantial funds and hiring and retaining additional management and technical personnel who have the necessary manufacturing experience. We may not successfully complete any required scale-up in a timely manner or at all. If unable to do so, we may not be able to produce our MGuardTM stent in sufficient quantities to meet the requirements for the launch of the product or to meet future demand, if at all. If we develop and obtain regulatory approval for our MGuardTM stent and are unable to manufacture a sufficient supply of our MGuardTM stent, our revenues, business and financial prospects would be adversely affected. In addition, if the scaled-up production process is not efficient or produces stents that do not meet quality and other standards, our future gross margins may decline. Also, our current and planned personnel, systems, procedures and controls may not be adequate to support our anticipated growth. If we are unable to manage our growth effectively, our business could be harmed.

Additionally, any damage to or destruction of our Tel Aviv facilities or its equipment, prolonged power outage or contamination at our facility would significantly impair our ability to produce MGuardTM stents.

Finally, the production of our MGuard TM stent must occur in a highly controlled, clean environment to minimize particles and other yield and quality-limiting contaminants. In spite of stringent quality controls, weaknesses in process control or minute impurities in materials may cause a substantial percentage of defective products in a lot. If we are unable to maintain stringent quality controls, or if contamination problems arise, our clinical development and commercialization efforts could be delayed, which would harm our business and results of operations.

Clinical trials necessary to support a pre-market approval application will be lengthy and expensive and will require the enrollment of a large number of patients, and suitable patients may be difficult to identify and recruit. Any such delay or failure of clinical trials could prevent us from commercializing our stent products, which would materially and adversely affect our results of operations and the value of our business.

Clinical trials necessary to support a pre-market approval application to the U.S. Food and Drug Administration for our MGuardTM stent will be expensive and will require the enrollment of a large number of patients, and suitable patients may be difficult to identify and recruit, which may cause a delay in the development and commercialization of our product candidates. Clinical trials supporting a pre-market approval applications for the Cypher stent and the Taxus Express2 stent, which were approved by the U.S. Food and Drug Administration and are currently marketed, involved patient populations of approximately 1,000 and 1,300, respectively, and a 12-month follow up period. In some trials, a greater number of patients and a longer follow up period may be required. The U.S. Food and Drug Administration may require us to submit data on a greater number of patients or for a longer follow-up period than those for pre-market approval applications for the Cypher stent and the Taxus Express2 stent. Patient enrollment in clinical trials and the ability to successfully complete patient follow-up depends on many factors, including the size of the patient population, the nature of the trial protocol, the proximity of patients to clinical sites, the eligibility criteria for the clinical trial and patient compliance. For example, patients may be discouraged from enrolling in our clinical trials if the trial protocol requires them to undergo extensive post-treatment procedures or follow-up to assess the safety and efficacy of our products, or they may be persuaded to participate in contemporaneous clinical trials of competitive products. In addition, patients participating in our clinical trials may die before completion of the trial or suffer adverse medical events unrelated to or related to our products. Delays in patient enrollment or failure of patients to continue to participate in a clinical trial may cause an increase in costs and delays or result in the failure of the clinical trial.

In addition, the length of time required to complete clinical trials for pharmaceutical and medical device products varies substantially according to the degree of regulation and the type, complexity, novelty and intended use of a product, and can continue for several years and cost millions of dollars. The commencement and completion of clinical trials for our products under development may be delayed by many factors, including governmental or regulatory delays and changes in regulatory requirements, policy and guidelines or our inability or the inability of any potential licensee to manufacture or obtain from third parties materials sufficient for use in preclinical studies and clinical trials.

Physicians may not widely adopt the MGuardTM stent unless they determine, based on experience, long-term clinical data and published peer reviewed journal articles, that the use of the MGuardTM stent provides a safe and effective alternative to other existing treatments for coronary artery disease.

We believe that physicians will not widely adopt the MGuardTM stent unless they determine, based on experience, long-term clinical data and published peer reviewed journal articles, that the use of our MGuardTM stent provides a safe and effective alternative to other existing treatments for coronary artery disease, including coronary artery bypass grafting balloon angioplasty, bare-metal stents and other drug-eluting stents, provided by Johnson & Johnson, Boston Scientific Corporation, Medtronic Inc., Abbott Laboratories and others.

We cannot provide any assurance that the data collected from our current and planned clinical trials will be sufficient to demonstrate that the MGuardTM stents are an attractive alternative to other procedures. If we fail to demonstrate safety and efficacy that is at least comparable to other drug-eluting stents or bare-metal stents that have received regulatory approval and that are available on the market, our ability to successfully market the MGuardTM stent will be significantly limited. Even if the data collected from clinical studies or clinical experience indicate positive results, each physician's actual experience with our MGuardTM stent will vary. Clinical trials conducted with the MGuardTM stent have involved procedures performed by physicians who are technically proficient and are high-volume stent users. Consequently, both short-term and long-term results reported in these clinical trials may be significantly more favorable than typical results of practicing physicians, which could negatively affect rates of adoptions of our products. We also believe that published peer-reviewed journal articles and recommendations and support by influential physicians regarding our MGuardTM stent will be important for market acceptance and adoption, and we cannot assure you that we will receive these recommendations and support, or that supportive articles will be published.

In addition, currently, physicians consider drug-eluting stents to be the industry standard for treatment of coronary artery disease. While we believe that the MGuardTM stent is a safe and effective alternative, it is not a drug-eluting stent, which may further hinder its support and adoption by physicians.

Our products are based on a new technology, and we have only limited experience in regulatory affairs, which may affect our ability or the time required to navigate complex regulatory requirements and obtain necessary regulatory approvals, if such approvals are received at all. Regulatory delays or denials may increase our costs, cause us to lose revenue and materially and adversely affect our results of operations and the value of our business.

Because our products are new and long-term success measures have not been completely validated, regulatory agencies, including the U.S. Food and Drug Administration, may take a significant amount of time in evaluating product approval applications. For example, there are currently several methods of measuring restenosis and we do not know which of these metrics, or combination of these metrics, will be considered appropriate by the U.S. Food and Drug Administration for evaluating the clinical efficacy of stents. Treatments may exhibit a favorable measure using one of these metrics and an unfavorable measure using another metric. Any change in the accepted metrics may result in reconfiguration of, and delays in, our clinical trials. Additionally, we have only limited experience in filing and prosecuting the applications necessary to gain regulatory approvals, and our clinical, regulatory and quality assurance personnel are currently composed of only 3 employees. As a result, we may experience a long regulatory process in connection with obtaining regulatory approvals for our products.

In addition, the products we and any potential licensees license, develop, manufacture and market are subject to complex regulatory requirements, particularly in the U.S., Europe and Asia, which can be costly and time-consuming. There can be no assurance that such approvals will be granted on a timely basis, if at all. Furthermore, there can be no assurance of continued compliance with all regulatory requirements necessary for the manufacture, marketing and sale of the products we will offer in each market where such products are expected to be sold, or that products we have commercialized will continue to comply with applicable regulatory requirements. If a government regulatory agency were to conclude that we were not in compliance with applicable laws or regulations, the agency could institute proceedings to detain or seize our products, issue a recall, impose operating restrictions, enjoin future violations and assess civil and criminal penalties against us, our officers or employees and could recommend criminal prosecution. Furthermore, regulators may proceed to ban, or request the recall, repair, replacement or refund of the cost of, any device manufactured or sold by us. Furthermore, there can be no assurance that all necessary regulatory approvals will be obtained for the manufacture, marketing and sale in any market of any new product developed or that any potential licensee will develop using our licensed technology.

Even if our products are approved by regulatory authorities, if we or our suppliers fail to comply with ongoing regulatory requirements, or if we experience unanticipated problems with our products, these products could be subject to restrictions or withdrawal from the market.

Any product for which we obtain marketing approval in the U.S., along with the manufacturing processes, post-approval clinical data and promotional activities for such product, will be subject to continual review and periodic inspections by the U.S. Food and Drug Administration and other regulatory bodies. In particular, we and our suppliers will be required to comply with the U.S. Food and Drug Administration's Quality System Regulation for the manufacture of our MGuardTM stent, which covers the methods and documentation of the design, testing, production, control, quality assurance, labeling, packaging, storage and shipping of any product for which we obtain marketing approval in the U.S. Food and Drug Administration enforces the Quality System Regulation through unannounced inspections. We and our third-party manufacturers and suppliers have not yet been inspected by the U.S. Food and Drug Administration and will have to successfully complete such inspections before we receive U.S. regulatory approval for our products. Failure by us or one of our suppliers to comply with statutes and regulations administered by the U.S. Food and Drug Administration and other regulatory bodies, or failure to take adequate response to any observations, could result in, among other things, any of the following enforcement actions:

- warning letters or untitled letters;
- fines and civil penalties;
- unanticipated expenditures;
- delays in approving, or refusal to approve, our products;
- withdrawal or suspension of approval by the U.S. Food and Drug Administration or other regulatory bodies;
- product recall or seizure;

- orders for physician notification or device repair, replacement or refund;
- interruption of production;
- operating restrictions;
- injunctions; and
- criminal prosecution.

If any of these actions were to occur, it could harm our reputation and could cause our product sales and profitability to suffer. Furthermore, key component suppliers may not currently be or may not continue to be in compliance with applicable regulatory requirements.

Even if regulatory approval of a product is granted in the U.S., the approval may be subject to limitations on the indicated uses for which the product may be marketed. If the U.S. Food and Drug Administration determines that our promotional materials, training or other activities constitutes promotion of an unapproved use, it could request that we cease or modify our training or promotional materials or subject us to regulatory enforcement actions. It is also possible that other federal, state or foreign enforcement authorities might take action if they consider our training or other promotional materials to constitute promotion of an unapproved use, which could result in significant fines or penalties under other statutory authorities, such as laws prohibiting false claims for reimbursement.

Moreover, any modification to a device that has received U.S. Food and Drug Administration approval that could significantly affect its safety or effectiveness, or that would constitute a major change in its intended use, design or manufacture, requires a new approval from the U.S. Food and Drug Administration. If the U.S. Food and Drug Administration disagrees with any determination by us that new approval is not required, we may be required to cease marketing or to recall the modified product until approval is obtained. In addition, we could also be subject to significant regulatory fines or penalties.

Additionally, we may be required to conduct costly post-market testing and surveillance to monitor the safety or efficacy of our products, and we will be required to report adverse events and malfunctions related to our products. Later discovery of previously unknown problems with our products, including unanticipated adverse events or adverse events of unanticipated severity or frequency, manufacturing problems, or failure to comply with regulatory requirements, such as Quality System Regulation, may result in restrictions on such products or manufacturing processes, withdrawal of the products from the market, voluntary or mandatory recalls, fines, suspension of regulatory approvals, product seizures, injunctions or the imposition of civil or criminal penalties.

Further, healthcare laws and regulations may change significantly in the future. Any new healthcare laws or regulations may adversely affect our business. A review of our business by courts or regulatory authorities may result in a determination that could adversely affect our operations. In addition, the healthcare regulatory environment may change in a way that restricts our operations.

Failure to obtain regulatory approval in foreign jurisdictions will prevent us from marketing our products in such jurisdictions.

We intend to market our products in international markets. In order to market our products in other foreign jurisdictions, we must obtain separate regulatory approvals from those obtained in the U.S. and Europe. The approval procedure varies among countries and can involve additional testing, and the time required to obtain approval may differ from that required to obtain CE Mark or U.S. Food and Drug Administration approval. Foreign regulatory approval processes may include all of the risks associated with obtaining CE Mark or U.S. Food and Drug Administration approval in addition to other risks. We may not obtain foreign regulatory approvals on a timely basis, if at all. CE Mark does not ensure approval by regulatory authorities in other countries. We may not be able to file for regulatory approvals and may not receive necessary approvals to commercialize our products in certain markets.

We operate in an intensely competitive and rapidly changing business environment, and there is a substantial risk our products could become obsolete or uncompetitive.

The medical device market is highly competitive. We compete with many medical service companies in the U.S. and internationally in connection with our current product and products under development. We face competition from numerous pharmaceutical and biotechnology companies in the therapeutics area, as well as competition from academic institutions, government agencies and research institutions. When we commercialize our products, we expect to face intense competition from Cordis Corporation, a subsidiary of Johnson & Johnson, Boston Scientific Corporation, Guidant, Medtronic, Inc., Abbott Vascular Devices, Terumo and others. Most of our current and potential competitors, including but not limited to those listed above, have, and will continue to have, substantially greater financial, technological, research and development, regulatory and clinical, manufacturing, marketing and sales, distribution and personnel resources than we do. There can be no assurance that we will have sufficient resources to successfully commercialize our products, if and when they are approved for sale. The worldwide market for stent products is characterized by intensive development efforts and rapidly advancing technology. Our future success will depend largely upon our ability to anticipate and keep pace with those developments and advances. Current or future competitors could develop alternative technologies, products or materials that are more effective, easier to use or more economical than what we or any potential licensee develop. If our technologies or products become obsolete or uncompetitive, our related product sales and licensing revenue would decrease. This would have a material adverse effect on our business, financial condition and results of operations.

We may become subject to claims by much larger and better capitalized competitors seeking to invalidate our right to our intellectual property.

Based on the prolific litigation that has occurred in the stent industry and the fact that we may pose a competitive threat to some large and well-capitalized companies that own or control patents relating to stents and their use, manufacture and delivery, we believe that it is possible that one or more third parties will assert a patent infringement claim against the manufacture, use or sale of our MGuardTM stent based on one or more of these patents. It is also possible that a lawsuit asserting patent infringement and related claims may have already been filed against us of which we are not aware. A number of these patents are owned by very large and well-capitalized companies that are active participants in the stent market. As the number of competitors in the stent market grows, the possibility of patent infringement by us, or a patent infringement claim against us, increases.

These companies have maintained their position in the market by, among other things, establishing intellectual property rights relating to their products and enforcing these rights aggressively against their competitors and new entrants into the market. All of the major companies in the stent and related markets, including Boston Scientific Corporation, Johnson & Johnson and Medtronic, Inc., have been repeatedly involved in patent litigation relating to stents since at least 1997. The stent and related markets have experienced rapid technological change and obsolescence in the past, and our competitors have strong incentives to stop or delay the introduction of new products and technologies. We may pose a competitive threat to many of the companies in the stent and related markets. Accordingly, many of these companies will have a strong incentive to take steps, through patent litigation or otherwise, to prevent us from commercializing our products.

If we fail to maintain or establish satisfactory agreements with suppliers, we may not be able to obtain materials that are necessary to develop our products.

We depend on outside suppliers for certain raw materials. These raw materials or components may not always be available at our standards or on acceptable terms, if at all, and we may be unable to locate alternative suppliers or produce necessary materials or components on our own.

Some of the components of our products are currently provided by only one vendor, or a single-source supplier. We depend on QualiMed Innovative Medizinprodukte GmbH, which manufactures the body of the stent, MeKo Laserstrahl-Materialbearbeitung for the laser cutting of the stent, Natec Medical Ltd. for the supply of catheters and Biogeneral Inc. for the fiber. We may have difficulty obtaining similar components from other suppliers that are acceptable to the U.S. Food and Drug Administration or foreign regulatory authorities if it becomes necessary.

If we have to switch to a replacement supplier, we will face additional regulatory delays and the interruption of the manufacture and delivery of our MGuard TM stent for an extended period of time, which would delay completion of our clinical trials or commercialization of our products. In addition, we will be required to obtain prior regulatory approval from the U.S. Food and Drug Administration or foreign regulatory authorities to use different suppliers or components that may not be as safe or as effective. As a result, regulatory approval of our products may not be received on a timely basis or at all.

We may be exposed to product liability claims and insurance may not be sufficient to cover these claims.

We may be exposed to product liability claims based on the use of any of our products, or products incorporating our licensed technology, in clinical trials. We may also be exposed to product liability claims based on the sale of any such products following the receipt of regulatory approval. Product liability claims could be asserted directly by consumers, health-care providers or others. We have obtained product liability insurance coverage; however such insurance may not provide full coverage for our future clinical trials, products to be sold, and other aspects of our business. We also have liability insurance for our ongoing clinical trial in Europe. Insurance coverage is becoming increasingly expensive and we may not be able to maintain current coverages, or expand our insurance coverage to include future clinical trials or the sale of products incorporating our licensed technology if marketing approval is obtained for such products, at a reasonable cost or in sufficient amounts to protect against losses due to product liability or at all. A successful product liability claim or series of claims brought against us could result in judgments, fines, damages and liabilities that could have a material adverse effect on our business, financial condition and results of operations. We may incur significant expense investigating and defending these claims, even if they do not result in liability. Moreover, even if no judgments, fines, damages or liabilities are imposed on us, our reputation could suffer, which could have a material adverse effect on our business, financial condition and results of operations.

We may implement a product recall or voluntary market withdrawal due to product defects or product enhancements and modifications, which would significantly increase our costs.

The manufacturing and marketing of our MGuardTM stent products involves an inherent risk that our products may prove to be defective. In that event, we may voluntarily implement a recall or market withdrawal or may be required to do so by a regulatory authority. A recall of one of our products, or a similar product manufactured by another manufacturer, could impair sales of the products we market as a result of confusion concerning the scope of the recall or as a result of the damage to our reputation for quality and safety.

The successful management of operations depends on our ability to attract and retain talented personnel.

We depend on the expertise of our senior management and research personnel, including our chief executive officer, Ofir Paz, and president, Asher Holzer, each of whom would be difficult to replace. The loss of the services of any of our senior management could compromise our ability to achieve our objectives. Furthermore, recruiting and retaining qualified personnel will be crucial to future success. There can be no assurance that we will be able to attract and retain necessary personnel on acceptable terms given the competition among medical device, biotechnology, pharmaceutical and healthcare companies, universities and non-profit research institutions for experienced management, scientists, researchers, and sales and marketing and manufacturing personnel. If we are unable to attract, retain and motivate our key personnel, our operations may be jeopardized and our results of operations may be materially and adversely affected.

We are an international business, and we are exposed to various global and local risks that could have a material adverse effect on our financial condition and results of operations.

We operate globally and develop and manufacture products in our research and manufacturing facilities in multiple countries. Consequently, we face complex legal and regulatory requirements in multiple jurisdictions, which may expose us to certain financial and other risks. International sales and operations are subject to a variety of risks, including:

- foreign currency exchange rate fluctuations;
- greater difficulty in staffing and managing foreign operations;
- greater risk of uncollectible accounts;
- longer collection cycles;
- logistical and communications challenges;
- potential adverse changes in laws and regulatory practices, including export license requirements, trade barriers, tariffs and tax laws;
- changes in labor conditions;
- burdens and costs of compliance with a variety of foreign laws;
- political and economic instability;

- increases in duties and taxation;
- foreign tax laws and potential increased costs associated with overlapping tax structures;
- greater difficulty in protecting intellectual property; and
- general economic and political conditions in these foreign markets.

International markets are also affected by economic pressure to contain reimbursement levels and healthcare costs. Profitability from international operations may be limited by risks and uncertainties related to regional economic conditions, regulatory and reimbursement approvals, competing products, infrastructure development, intellectual property rights protection and our ability to implement our overall business strategy. We expect these risks will increase as we pursue our strategy to expand operations into new geographic markets. We may not succeed in developing and implementing effective policies and strategies in each location where we conduct business. Any failure to do so may harm our business, results of operations and financial condition.

If we fail to obtain an adequate level of reimbursement for our products by third party payors, there may be no commercially viable markets for our product candidates or the markets may be much smaller than expected.

The availability and levels of reimbursement by governmental and other third party payors affect the market for our product candidates. The efficacy, safety, performance and cost-effectiveness of our product candidates and of any competing products will determine the availability and level of reimbursement. Reimbursement and healthcare payment systems in international markets vary significantly by country, and include both government sponsored healthcare and private insurance. To obtain reimbursement or pricing approval in some countries, we may be required to produce clinical data, which may involve one or more clinical trials, that compares the cost-effectiveness of our products to other available therapies. We may not obtain international reimbursement or pricing approvals in a timely manner, if at all. Our failure to receive international reimbursement or pricing approvals would negatively impact market acceptance of our products in the international markets in which those approvals are sought.

We believe that future reimbursement may be subject to increased restrictions both in the U.S. and in international markets. There is increasing pressure by governments worldwide to contain health care costs by limiting both the coverage and the level of reimbursement for therapeutic products and by refusing, in some cases, to provide any coverage for products that have not been approved by the relevant regulatory agency. Future legislation, regulation or reimbursement policies of third party payors may adversely affect the demand for our products currently under development and limit our ability to sell our product candidates on a profitable basis. In addition, third party payors continually attempt to contain or reduce the costs of healthcare by challenging the prices charged for healthcare products and services. If reimbursement for our products is unavailable or limited in scope or amount or if pricing is set at unsatisfactory levels, market acceptance of our products would be impaired and future revenues, if any, would be adversely affected.

In the U.S., our business could be significantly and adversely affected by recent healthcare reform legislation and other administration and legislative proposals.

The Patient Protection and Affordable Care Act and Health Care and Educational Reconciliation Act in the U.S. were enacted into law in March 2010. Certain provisions of these acts will not be effective for a number of years and there are many programs and requirements for which the details have not yet been fully established or consequences not fully understood, and it is unclear what the full impacts will be from the legislation. The legislation does levy a 2.3% excise tax on all U.S. medical device sales beginning in 2013. If we commence sales of our MGuardTM stent in the U.S., this new tax may materially and adversely affect our business and results of operations. The legislation also focuses on a number of Medicare provisions aimed at improving quality and decreasing costs. It is uncertain at this point what negative unintended consequences these provisions will have on patient access to new technologies. The Medicare provisions include value-based payment programs, increased funding of comparative effectiveness research, reduced hospital payments for avoidable readmissions and hospital acquired conditions, and pilot programs to evaluate alternative payment methodologies that promote care coordination (such as bundled physician and hospital payments). Additionally, the provisions include a reduction in the annual rate of inflation for hospitals starting in 2011 and the establishment of an independent payment advisory board to recommend ways of reducing the rate of growth in Medicare spending. We cannot predict what healthcare programs and regulations will be ultimately implemented at the federal or state level in the U.S., or the effect of any future legislation or regulation. However, any changes that lower reimbursements for our products or reduce medical procedure volumes could adversely affect our business and results of operations.

Our strategic business plan may not produce the intended growth in revenue and operating income.

Our strategies include making significant investments in sales and marketing programs to achieve revenue growth and margin improvement targets. If we do not achieve the expected benefits from these investments or otherwise fail to execute on our strategic initiatives, we may not achieve the growth improvement we are targeting and our results of operations may be adversely affected.

In addition, as part of our strategy for growth, we may make acquisitions and enter into strategic alliances such as joint ventures and joint development agreements. However, we may not be able to identify suitable acquisition candidates, complete acquisitions or integrate acquisitions successfully, and our strategic alliances may not prove to be successful. In this regard, acquisitions involve numerous risks, including difficulties in the integration of the operations, technologies, services and products of the acquired companies and the diversion of management's attention from other business concerns. Although our management will endeavor to evaluate the risks inherent in any particular transaction, there can be no assurance that we will properly ascertain all such risks. In addition, acquisitions could result in the incurrence of substantial additional indebtedness and other expenses or in potentially dilutive issuances of equity securities. There can be no assurance that difficulties encountered with acquisitions will not have a material adverse effect on our business, financial condition and results of operations.

We may have violated Israeli securities law.

We may have violated section 15 of the Israeli Security Law of 1968. Section 15 of the Israeli Security Law of 1968 requires the filing of a prospectus with the Israel Security Authority and the delivery thereof to purchasers in connection with an offer or sale of securities to more than 35 parties during any 12 month period. We allegedly issued securities to more than 35 investors during certain 12-month periods ending in October 2008. We filed an application for "No action" with the Israel Security Authority in connection with the foregoing on February 14, 2011. Members of our management met with the Israel Security Authority on March 9, 2011 and submitted complementary information requested by the Israel Security Authority on March 20, 2011. To date, the Israel Security Authority has not provided any response to our application. A failure to receive "No action" relief could expose us to fines in excess of \$1 million and could subject members of our management during the period of the alleged violations to fines, imprisonment, or prohibition from serving as a senior officer of a reporting company under the Israel Security Law.

We will need to raise additional capital to meet our business requirements in the future and such capital raising may be costly or difficult to obtain and could dilute current stockholders' ownership interests.

We will need to raise additional capital in the future, which may not be available on reasonable terms or at all. We recently raised approximately \$10,500,000 and expect that such proceeds, together with our income, will be insufficient to fully realize all of our business objectives. For instance, we will need to raise additional funds to accomplish the following:

- pursuing growth opportunities, including more rapid expansion;
- acquiring complementary businesses;
- making capital improvements to improve our infrastructure;
- hiring qualified management and key employees;
- developing new services, programming or products;
- responding to competitive pressures;
- complying with regulatory requirements such as licensing and registration; and
- maintaining compliance with applicable laws.

Any additional capital raised through the sale of equity or equity backed securities may dilute current stockholders' ownership percentages and could also result in a decrease in the market value of our equity securities.

The terms of any securities issued by us in future capital transactions may be more favorable to new investors, and may include preferences, superior voting rights and the issuance of warrants or other derivative securities, which may have a further dilutive effect on the holders of any of our securities then outstanding.

Furthermore, any additional debt or equity financing that we may need may not be available on terms favorable to us, or at all. If we are unable to obtain such additional financing on a timely basis, we may have to curtail our development activities and growth plans and/or be forced to sell assets, perhaps on unfavorable terms, which would have a material adverse effect on our business, financial condition and results of operations, and ultimately could be forced to discontinue our operations and liquidate, in which event it is unlikely that stockholders would receive any distribution on their shares. Further, we may not be able to continue operating if we do not generate sufficient revenues from operations needed to stay in business.

In addition, we may incur substantial costs in pursuing future capital financing, including investment banking fees, legal fees, accounting fees, securities law compliance fees, printing and distribution expenses and other costs. We may also be required to recognize non-cash expenses in connection with certain securities we issue, such as convertible notes and warrants, which may adversely impact our financial condition.

Risks Related to Our Organization and Our Common Stock

We are subject to financial reporting and other requirements for which our accounting, internal audit and other management systems and resources may not be adequately prepared.

On March 31, 2011, we became subject to reporting and other obligations under the Securities Exchange Act of 1934, as amended, including the requirements of Section 404 of the Sarbanes-Oxley Act. Section 404 will require us to conduct an annual management assessment of the effectiveness of our internal controls over financial reporting and to obtain a report by our independent auditors addressing these assessments. These reporting and other obligations will place significant demands on our management, administrative, operational, internal audit and accounting resources. We anticipate that we will need to upgrade our systems; implement additional financial and management controls, reporting systems and procedures; implement an internal audit function; and hire additional accounting, internal audit and finance staff. If we are unable to accomplish these objectives in a timely and effective fashion, our ability to comply with our financial reporting requirements and other rules that apply to reporting companies could be impaired. Any failure to maintain effective internal controls could have a material adverse effect on our business, operating results and stock price. Moreover, effective internal control is necessary for us to provide reliable financial reports and prevent fraud. If we cannot provide reliable financial reports or prevent fraud, we may not be able to manage our business as effectively as we would if an effective control environment existed, and our business and reputation with investors may be harmed.

Because we became public by means of a "reverse merger," we may not be able to attract the attention of major brokerage firms.

There may be risks associated with us becoming public through a "reverse merger." Securities analysts of major brokerage firms may not provide coverage of us since there is no incentive to brokerage firms to recommend the purchase of our common stock. No assurance can be given that brokerage firms will, in the future, want to conduct any secondary offerings on our behalf.

Our stock price may be volatile.

The market price of our common stock is likely to be highly volatile and could fluctuate widely in response to various factors, many of which are beyond our control, including the following:

- technological innovations or new products and services by us or our competitors;
- additions or departures of key personnel;
- sales of our common stock, particularly under any registration statement for the purposes of selling any other securities, including management shares;
- limited availability of freely-tradable "unrestricted" shares of our common stock to satisfy purchase orders and demand;
- our ability to execute our business plan;

- operating results that fall below expectations;
- loss of any strategic relationship;
- industry developments;
- economic and other external factors; and
- period-to-period fluctuations in our financial results.

In addition, the securities markets have from time to time experienced significant price and volume fluctuations that are unrelated to the operating performance of particular companies. These market fluctuations may also significantly affect the market price of our common stock.

We are subject to penny stock rules which will make the shares of our common stock more difficult to sell.

We are subject to the Securities and Exchange Commission's "penny stock" rules since our shares of common stock sell below \$5.00 per share. Penny stocks generally are equity securities with a per share price of less than \$5.00. The penny stock rules require broker-dealers to deliver a standardized risk disclosure document prepared by the Securities and Exchange Commission that provides information about penny stocks and the nature and level of risks in the penny stock market. The broker-dealer must also provide the customer with current bid and offer quotations for the penny stock, the compensation of the broker-dealer and its salesperson, and monthly account statements showing the market value of each penny stock held in the customer's account. The bid and offer quotations, and the broker-dealer and salesperson compensation information must be given to the customer orally or in writing prior to completing the transaction and must be given to the customer in writing before or with the customer's confirmation.

In addition, the penny stock rules require that prior to a transaction the broker-dealer must make a special written determination that the penny stock is a suitable investment for the purchaser and receive the purchaser's written agreement to the transaction. The penny stock rules are burdensome and may reduce purchases of any offerings and reduce the trading activity for shares of our common stock. As long as our shares of common stock are subject to the penny stock rules, the holders of such shares of common stock may find it more difficult to sell their securities.

There is, at present, only a limited market for our common stock and we cannot ensure that an active market for our common stock will ever develop or be sustained.

Our shares of common stock are thinly traded. Due to the illiquidity, the market price may not accurately reflect our relative value. There can be no assurance that there will be an active market for our shares of common stock either now or in the future. Because our common stock is so thinly traded, a large block of shares traded can lead to a dramatic fluctuation in the share price and investors may not be able to liquidate their investment in us at all or at a price that reflects the value of the business. In addition, our common stock currently trades on the OTC Bulletin Board, which generally lacks the liquidity, research coverage and institutional investor following of a national securities exchange like the NYSE Amex, the New York Stock Exchange or the Nasdaq Stock Market. While we intend to list our common stock on a national securities exchange once we satisfy the initial listing standards for such an exchange, we currently do not, and may not ever, satisfy such initial listing standards.

Our board of directors can authorize the issuance of preferred stock, which could diminish the rights of holders of our common stock, and make a change of control of us more difficult even if it might benefit our stockholders.

Our board of directors is authorized to issue shares of preferred stock in one or more series and to fix the voting powers, preferences and other rights and limitations of the preferred stock. Accordingly, we may issue shares of preferred stock with a preference over our common stock with respect to dividends or distributions on liquidation or dissolution, or that may otherwise adversely affect the voting or other rights of the holders of common stock. Issuances of preferred stock, depending upon the rights, preferences and designations of the preferred stock, may have the effect of delaying, deterring or preventing a change of control, even if that change of control might benefit our stockholders.

Offers or availability for sale of a substantial number of shares of our common stock may cause the price of our common stock to decline.

Sales of a significant number of shares of our common stock in the public market could harm the market price of our common stock and make it more difficult for us to raise funds through future offerings of common stock. In addition, if our stockholders sell substantial amounts of our common stock in the public market, upon the expiration of any statutory holding period under Rule 144, upon the expiration of lock-up periods applicable to outstanding shares, or upon the exercise of outstanding options or warrants, it could create a circumstance commonly referred to as an "overhang" in anticipation of which the market price of our common stock could fall. The existence of an overhang, whether or not sales have occurred or are occurring, could also make it more difficult for us to raise additional financing through the sale of equity or equity-related securities in the future at a time and price that we deem reasonable or appropriate.

We do not expect to pay dividends in the future. As a result, any return on investment may be limited to the value of our common stock.

We do not anticipate paying cash dividends on our common stock in the foreseeable future. The payment of dividends on our common stock will depend on our earnings, financial condition and other business and economic factors as our board of directors may consider relevant. If we do not pay dividends, our common stock may be less valuable because a return on an investment in our common stock will only occur if our stock price appreciates.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

On April 18, 2011, we consummated a private placement with an investor pursuant to which we sold 666,667 shares of our common stock and a five-year warrant to purchase up to 333,333 shares of common stock at an exercise price of \$1.80 per share for aggregate cash proceeds of \$1,000,000. The securities sold in this offering were not registered under the Securities Act of 1933, as amended, or the securities laws of any state, and were offered and sold in reliance on the exemption from registration under the Securities Act of 1933, as amended, provided by Section 4(2) and Regulation D (Rule 506) under the Securities Act of 1933, as amended. This investor was an accredited investor (as defined by Rule 501 under the Securities Act of 1933, as amended) at the time of the private placement.

On April 18, 2011, we consummated a private placement with two accredited investors (as defined by Rule 501 under the Securities Act of 1933, as amended), pursuant to which we sold 283,334 shares of our common stock and a five-year warrant to purchase 141,667 shares of our common stock at an exercise price of \$1.80 per share, for aggregate cash proceeds of \$425,000. The securities sold in this offering were not registered under the Securities Act of 1933, as amended, or the securities laws of any state, and were offered and sold in reliance on the exemption from registration under the Securities Act of 1933, as amended, provided by Section 4(2) and Regulation D (Rule 506) under the Securities Act of 1933, as amended.

On April 18, 2011, upon the consummation of the above described April 18, 2011 private placements, we issued a five-year warrant to purchase up to 57,000 shares of common stock at an exercise price of \$1.80 per share to Palladium Capital Advisors, LLC, our placement agent in the April 18, 2011 private placements. The warrant was not registered under the Securities Act of 1933, as amended, or the securities laws of any state, and was offered and sold in reliance on the exemption from registration afforded by Section 4(2) and Regulation D (Rule 506) under the Securities Act of 1933, as amended, and corresponding provisions of state securities laws, which exempt transactions by an issuer not involving a public offering. Palladium Capital Advisors, LLC was an accredited investor (as defined by Rule 501 under the Securities Act of 1933, as amended) at the time of the private placement

On April 21, 2011, we consummated a private placement with Mr. Reinder Hogeboom pursuant to which we sold 33,333 shares of our common stock and a five-year warrant to purchase 16,667 shares of our common stock at an exercise price of \$1.80 per share, for aggregate cash proceeds of \$50,000. The securities sold in this offering were not registered under the Securities Act of 1933, as amended, or the securities laws of any state, and were offered and sold in reliance on the exemption from registration under the Securities Act of 1933, as amended, provided by Regulation S under the Securities Act of 1933, as amended. Reinder Hogeboom was not a "U.S. person" (as that term is defined in Rule 902 of Regulation S) at the time of the private placement.

On January 4, 2011, we entered into a convertible loan agreement with our distributer in Israel, in the amount of \$100,000. On June 1, 2011, we issued 81,161 shares of common stock to the lender upon conversion of the note. These securities were not registered under the Securities Act of 1933, as amended, or the securities laws of any state, and were offered and sold in reliance on the exemption from registration under the Securities Act of 1933, as amended, provided by Regulation S under the Securities Act of 1933, as amended. The lender was not a "U.S. person" (as that term is defined in Rule 902 of Regulation S) at the time of the issuance.

Item 6. Exhibits

(a) Exhibits

Exhibit No. 2.1*	<u>Description</u> Share Exchange Agreement, dated as of December 29, 2010, by and among InspireMD Ltd., Saguaro Resources, Inc., and the Shareholders of InspireMD Ltd. that are signatory thereto
2.2***	Amendment to Share Exchange Agreement, dated February 24, 2011
2.3***	Second Amendment to Share Exchange Agreement, dated March 25, 2011
3.1**	Amended and Restated Certificate of Incorporation
3.2**	Amended and Restated Bylaws
10.1**	2011 Umbrella Option Plan
10.2***	Form of Stock Option Award Agreement
10.3***	Agreement of Conveyance, Transfer and Assignment of Assets and Assumption of Obligations, dated as of March 31, 2011
10.4***	Stock Purchase Agreement, by and between InspireMD, Inc. and Lynn Briggs, dated as of March 31, 2011
10.5***	Securities Purchase Agreement, dated as of March 31, 2011, by and among InspireMD, Inc. and certain purchasers set forth therein
10.6***	Form of \$1.80 Warrant
10.7***	Form of \$1.23 Warrant

CERTIFICATION OF CHIEF EXECUTIVE OFFICER PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002

I, Ofir Paz, certify that:

- 1. I have reviewed this Quarterly Report on Form 10-Q of InspireMD, Inc.;
- 2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
- 3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
- 4. The registrant's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - a. designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - b. designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - c. evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - d. disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
- 5. The registrant's other certifying officer(s) and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - a. all significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - b. any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Chief Financial Officer

CERTIFICATION OF CHIEF EXECUTIVE OFFICER PURSUANT TO 18 U.S.C. SECTION 1350, AS ADOPTED PURSUANT TO SECTION 906 OF THE SARBANES-OXLEY ACT OF 2002

This certification is furnished solely pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 (18 U.S.C. 1350) and accompanies the Quarterly Report on Form 10-Q (the "Form 10-Q") for the quarter ended June 30, 2011 of InspireMD, Inc. (the "Company"). I, Ofir Paz, the Chief Executive Officer of the Company, certify that, based on my knowledge:

- (1) The Form 10-Q fully complies with the requirements of Section 13(a) or Section 15(d) of the Securities Exchange Act of 1934; and
- (2) The information contained in the Form 10-Q fairly presents, in all material respects, the financial condition and results of operations of the Company as of and for the periods covered in this report.

Date: August 15, 2011 By: /s/ Ofir Paz

Name: Ofir Paz

Title: Chief Executive Officer

The foregoing certification is being furnished as an exhibit to the Form 10-Q pursuant to Item 601(b)(32) of Regulation S-K and Section 906 of the Sarbanes-Oxley Act of 2002 (subsections (a) and (b) of Section 1350, Chapter 63 of Title 18, United States Code) and, accordingly, is not being filed as part of the Form 10-Q for purposes of Section 18 of the Securities Exchange Act of 1934, as amended, and is not incorporated by reference into any filing of the Company, whether made before or after the date hereof, regardless of any general incorporation language in such filing.

CERTIFICATION OF CHIEF FINANCIAL OFFICER PURSUANT TO 18 U.S.C. SECTION 1350, AS ADOPTED PURSUANT TO SECTION 906 OF THE SARBANES-OXLEY ACT OF 2002

This certification is furnished solely pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 (18 U.S.C. 1350) and accompanies the Quarterly Report on Form 10-Q (the "Form 10-Q") for the quarter ended June 30, 2011 of InspireMD, Inc. (the "Company"). I, Craig Shore, the Chief Financial Officer and Principal Financial Officer of the Company, certify that, based on my knowledge:

- (1) The Form 10-Q fully complies with the requirements of Section 13(a) or Section 15(d) of the Securities Exchange Act of 1934; and
- (2) The information contained in the Form 10-Q fairly presents, in all material respects, the financial condition and results of operations of the Company as of and for the periods covered in this report.

Date: August 15, 2011 By: /s/ Craig Shore
