# Market Shift

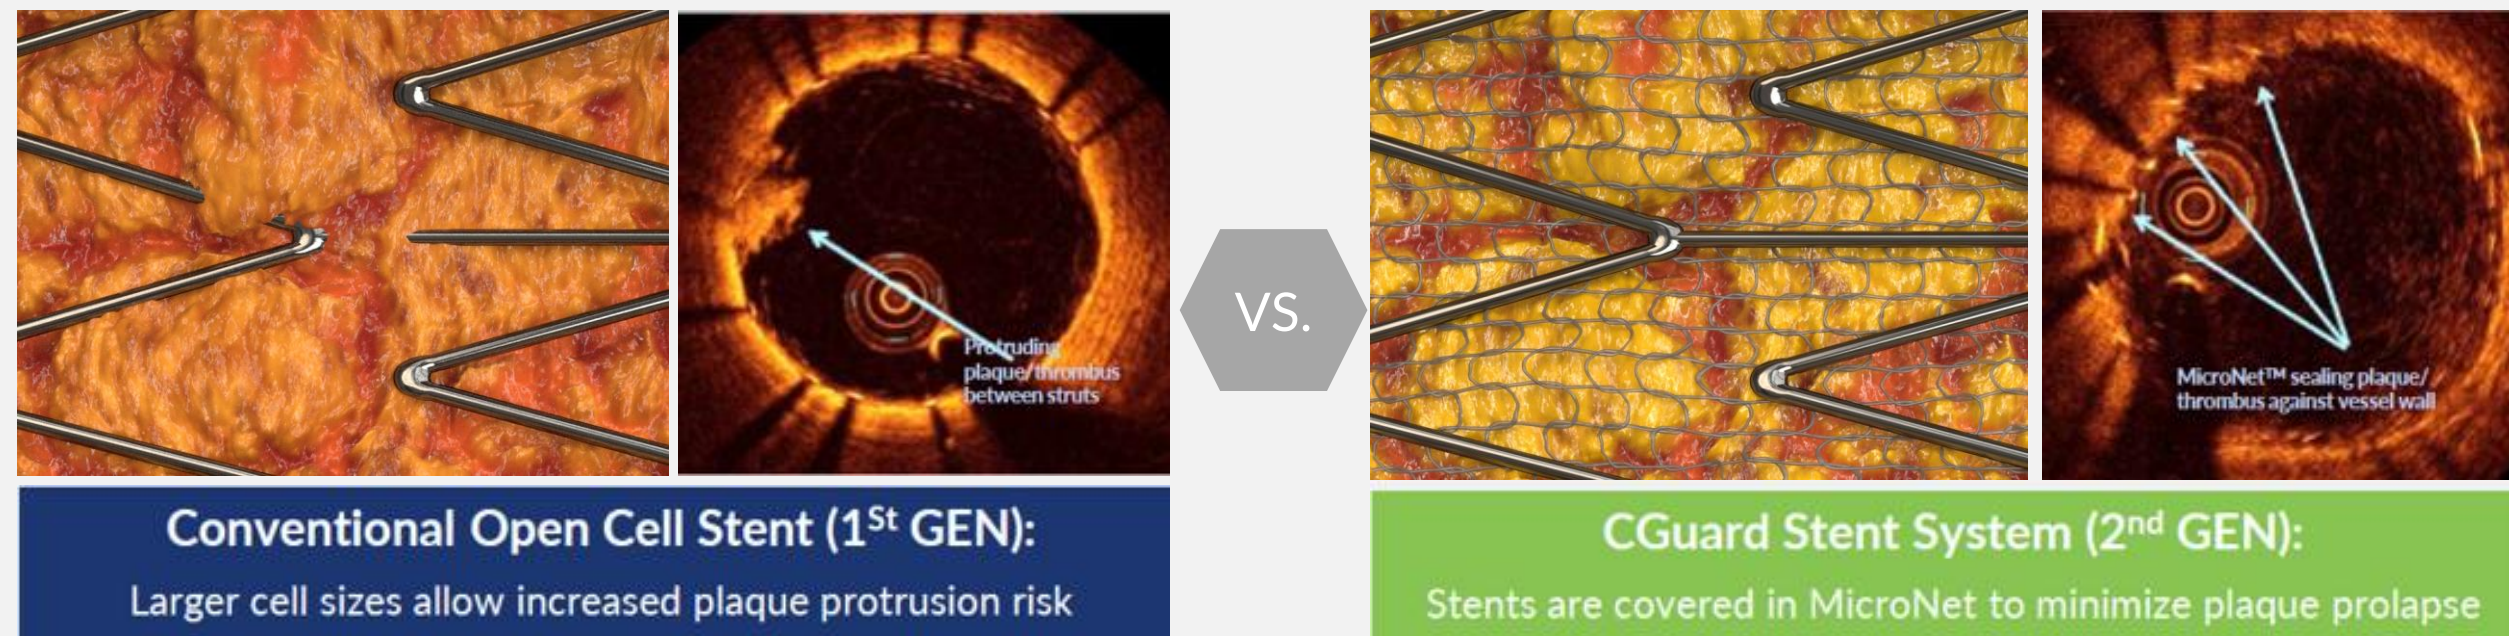

The market has already begun the shift from surgery to stents (procedures and revenue opportunity)

# The CGuard® Difference: The Impact of MicroNet™ Technology<sup>1</sup>

Approximately 2/3 of neurovascular events (stroke, TIA) occur after carotid interventions take place<sup>2</sup>. Prevention depends on the protection from the stent implanted

## MicroNet™ : Advanced Protection Technology

MicroNet captures and locks thrombus & plaque materials against the arterial wall, deterring debris from entering the bloodstream by acting as a mechanical barrier to prevent plaque prolapse

## Primary Endpoints

**Composite of DSMI through 30 days or ipsilateral stroke 31 - 365 days post-index procedure**

Calculation will be the composite of the following: incidence of the following major adverse events: death (all- cause mortality), all stroke, and myocardial infarction (DSMI) through 30-days post-index procedure, based on the clinical events or ipsilateral stroke from 31-365-day follow-up, based on CEC adjudication. The rate will be compared to a performance goal of 11.6% developed from published CAS literature.

# C-GUARDIANS: 30-Day Safety Outcomes

30-Day Death/Stroke/MI (DSMI) rates, compared to other carotid trials

	Intention to Treat	Per Protocol <sup>1,2</sup>
30-day DSMI	0.95% (3)	0.63% (2)
Death	0.32% (1)	0.0% (0)
Stroke	0.95% (3)	0.63% (2)
MI	0.00% (0)	0.0% (0)

- Demonstrates the lowest 30-day DSMI rates of any FDA approval/clearance trial for carotid intervention (CAS or TCAR)
- Trial includes independent event adjudication
- 0.95% event rate consistent with 1.03% 30-day event rate from >1350 patients in peer-reviewed, published studies of real-world use, supporting the CGuard Stent as a front-line therapeutic option for carotid revascularization

1. Kaplan-Meier estimate for all 1-year endpoints  
2. Per Protocol Analysis excludes 15 patients with Major Protocol Deviations

- Demonstrates the lowest primary endpoint event rates of any FDA approval/clearance trial for CAS
- Trial includes independent event adjudication
- 1.93% event rate consistent with 1.99% 1-year event rate from >1100 patients in peer-reviewed, published studies of real-world use, supporting the CGuard Stent as a front-line therapeutic option for carotid revascularization

1. Kaplan-Meier estimate for all 1-year endpoints

## 30-day and 12-month event rates by stent type (random-effect model)

- Improvements from second-generation stents (SGS) relative to first-generation stents (FGS), but important differences exist amongst the SGS
- CGuard®'s MicroNet™ **drives improvement both in event reduction** (due to improved scaffolding) and **restenosis reduction** (due to less metal burden)
