CGUARD™
 Carotid Embolic Prevention System

ENGINEERED TO PREVENT STROKES

CONTINUOUS EMBOLIC PREVENTION WITH MICRONET® SLEEVE

INSPIREMD

The MicroNet[®] Advantage

Designed to Prevent Distal Embolization and Stroke During and After CAS

CGuard[™] EPS (Embolic Prevention System) is covered with a MicroNet[®] bio-stable sleeve woven from a single strand of 20 μm Polyethylene Terephthalate (PET). The MicroNet[®] sleeve is designed to trap and seal thrombus and plaque against the vessel wall, providing continuous embolic prevention.

Win-Win Design

CGuard[™] EPS combines the benefits of open cell flexibility with the innovative MicroNet[®] sleeve—providing maximum surface protection against potential emboli.

Open Cell Nitinol Structure

SmartFit[™] Technology

Eliminates the need for tapered design.

SmartFit[™] Technology maintains optimal placement length regardless of vessel diameter.

MicroNet[®] Technology

- ✓ Traps and seals emboli
- ✓ Lends greater confidence in post-dilation
- ✓ Prevents plaque prolapse and late embolization
- ✓ No restenosis concerns at 12 months*
